9. Nurse Diagnosed Myocardial Infarction - Hidden Nurse Work and Iatrogenic Risk

Sommario/riassunto

Limiting Harm in Health Care highlights the potential for unnecessary harm in health care practice. This harm is mostly unintentional, but it can result from many different aspects of medical treatment in a wide range of practice areas. Adverse events, events or omissions during clinical care resulting in physical or psychological injury, are increasingly being recognised as significant problems in health care. Following clarification of the nature and extent of medical harm in health care, separate chapters explore the potential for medical harm in diverse areas of practice. Topics
