

1. Record Nr.	UNISA996215470303316
Titolo	ICSP'06 : 2006 8th International Conference on Signal Processing : proceedings, November 16-20, 2006, Guilin, China
Pubbl/distr/stampa	[Place of publication not identified], : IEEE Press, 2006
ISBN	1-5090-9606-X 0-7803-9737-1
Disciplina	621.382/2
Soggetti	Signal processing - Digital techniques Image processing Telecommunications Electrical & Computer Engineering Engineering & Applied Sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph

2. Record Nr.	UNINA9910484374703321
Titolo	Complex Motion : First International Workshop, IWCM 2004, Günzburg, Germany, October 12-14, 2004, Revised Papers / / edited by Bernd Jähne, Rudolf Mester, Erhardt Barth, Hanno Scharf
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2007
ISBN	1-280-86506-7 9786610865062 3-540-69866-3
Edizione	[1st ed. 2007.]
Descrizione fisica	1 online resource (X, 238 p.)
Collana	Image Processing, Computer Vision, Pattern Recognition, and Graphics, , 3004-9954 ; ; 3417
Disciplina	006.37
Soggetti	Pattern recognition systems Computer vision Artificial intelligence Computer graphics Algorithms Automated Pattern Recognition Computer Vision Artificial Intelligence Computer Graphics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Optical Flow Estimation from Monogenic Phase -- Optimal Filters for Extended Optical Flow -- Wiener-Optimized Discrete Filters for Differential Motion Estimation -- Boundary Characterization Within the Wedge-Channel Representation -- Multiple Motion Estimation Using Channel Matrices -- Divide-and-Conquer Strategies for Estimating Multiple Transparent Motions -- Towards a Multi-camera Generalization of Brightness Constancy -- Complex Motion in Environmental Physics and Live Sciences -- Bayesian Approaches to Motion-Based Image and Video Segmentation -- On Variational Methods for Fluid Flow Estimation -- Motion Based Estimation and

Representation of 3D Surfaces and Boundaries -- A Probabilistic Formulation of Image Registration -- Myocardial Motion and Strain Rate Analysis from Ultrasound Sequences -- Determining the Translational Speed of a Camera from Time-Varying Optical Flow -- A Robust Approach for Ego-Motion Estimation Using a Mobile Stereo Platform -- Robust Monocular Detection of Independent Motion by a Moving Observer -- Tracking Complex Objects Using Graphical Object Models.

Sommario/riassunto

The world we live in is a dynamic one: we explore it by moving through it, and many of the objects which we are interested in are also moving. Traffic, for instance, is an example of a domain where detecting and processing visual motion is of vital interest, both in a metaphoric as well as in a purely literal sense. Visual communication is another important example of an area of science which is dominated by the need to measure, understand, and represent visual motion in an efficient way. Visual motion is a subject of research which forces the investigator to deal with complexity; complexity in the sense of facing a diversity of forms, starting from analyzing simple motion in a changing environment (illumination, shadows, . . .), under adverse observation conditions, such as bad signal-to-noise ratio (low illumination, small-scale processes, low-dose x-ray, etc.), covering also multiple motions of independent objects, occlusions, and - ing as far as dealing with objects which are complex in themselves (articulated objects such as bodies of living beings). The spectrum of problems includes, but does not end at, objects which are not 'bodies' at all, e. g. , when analyzing fluid motion, cloud motion, and so on. Analyzing the motion of a crowd in a shopping mall or in an airport is a further example that implies the need to struggle against the problems induced by complexity.
