Sommario/riassunto	The Roman world was fundamentally a face-to-face culture, where it was expected that communication and negotiations would be done in

person. This can be seen in Rome's contacts with other cities, states, and kingdoms — whether dependent, independent, friendly or hostile — and in the development of a diplomatic habit with its own rhythms and protocols that coalesced into a self-sustaining system of communication. This volume of papers offers ten perspectives on the way in which ambassadors, embassies, and the institutional apparatuses supporting them contributed to Roman rule.

Understanding Roman diplomatic practices illuminates not only questions about Rome's evolution as a Mediterranean power, but can also shed light on a wide variety of historical and cultural trends.

Contributors are: Sheila L. Ager, Alexander Yakobson, Filippo Battistoni, James B. Rives, Jean-Louis Ferry, Martin Jehne, T. Corey Brennan, Werner Eck, and Rudolf Haensch.

Sommario/riassunto

"This volume in *Advances in Econometrics* showcases fresh methodological and empirical research on the econometrics of networks. Comprising both theoretical, empirical and policy papers, the authors bring together a wide range of perspectives to facilitate a dialogue between academics and practitioners for better understanding this groundbreaking field and its role in policy discussions. This edited collection includes thirteen chapters which covers various topics such as identification of network models, network formation, networks and spatial econometrics and applications of financial networks. Readers can also learn about network models with different types of interactions, sample selection in social networks, trade networks, stochastic dynamic programming in space, spatial panels, survival and networks, financial contagion, spillover effects, interconnectedness on consumer credit markets and a financial risk meter."--
