Sommario/riassunto	Crimes against Nature reveals the hidden history behind three of the nation's first parklands: the Adirondacks, Yellowstone, and the Grand Canyon. Focusing on conservation's impact on local inhabitants, Karl Jacoby traces the effect of criminalizing such traditional practices as hunting, fishing, foraging, and timber cutting in the newly created

parks. Jacoby reassesses the nature of these ""crimes"" and provides a rich portrait of rural people and their relationship with the natural world in the late nineteenth and early twentieth centuries.

Sommario/riassunto	Jacob Boehme's Aurora (Morgen Röte im auffgang, 1612) exercised a vast open or underground influence on popular and mystical religion, poetry, and philosophy from Germany to England to Russia. This beautiful and highly original work containing elements of alchemical,

esoteric, and anticlerical thought is a portal to the cultural, scientific, and theological currents on the eve of the Thirty Years' War. Its author heralded the new heliocentrism, opposed intolerance and religious conflict, and entertained an ecstatic vision of order reconciled with freedom. This first modern English translation places the translated text opposite an edition of the German manuscript from the author's own hand. Also included is the brief, influential Fundamental Report (Gründlicher Bericht, 1620) in a critical edition and translation. An extensive commentary that cites documents of the time offers access to the sources of Boehme's themes and concepts.
