   Disciplina   006.76

   Soggetti   Multimedia systems - Standards

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Sommario/riassunto   This recommended practice develops an XML application defining a
                           standard language for symbolic music representation. The language is
                           a meta-representation of music information for describing and
                           processing said music information within a multi-layered environment,
                           for achieving integration among structural, score, Musical Instrument
                           Digital Interface (MIDI), and digital sound levels of representation.
                           Furthermore, the recommended practice integrates music
                           representation with already defined and accepted common standards.
