Sommario/riassunto	<p>Annotation The aim of the International Working Conference on Source Code Analysis & Manipulation (SCAM) is to bring together researchers and practitioners working on theory, techniques and applications which concern analysis and or manipulation of the source code of computer systems While much attention in the wider software engineering community is properly directed towards other aspects of systems development and evolution, such as specification, design and requirements engineering, it is the source code that contains the only precise description of the behaviour of the system The analysis and manipulation of source code thus remains a pressing concern.</p>
