

1. Record Nr.	UNISA996279412803316
Titolo	IEEE Std 603-1991 : IEEE standard criteria for safety systems for nuclear power generating stations // IEEE
Pubbl/distr/stampa	[Place of publication not identified] : , : IEEE, , 1991
ISBN	1-55937-144-7
Descrizione fisica	1 online resource
Disciplina	621.4835
Soggetti	Nuclear power plants - Safety measures Nuclear power plants - Reliability
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Establishes minimum functional design criteria for the power, instrumentation, and control portions of nuclear power generating station safety systems. The criteria are to be applied to those systems required to protect the public health and safety by functioning to mitigate the consequences of design basis events. The intent is to promote safe practices for design and evaluation of safety system performance and reliability. Although the standard is limited to safety systems, many of the principles may have applicability to equipment provided for safe shutdown, post-accident monitoring display instrumentation, preventive interlock features, or any other systems, structures, or equipment related to safety.
