

1. Record Nr.	UNISA996279560003316
Titolo	ANSI/IEEE Std C57.100-1986 : IEEE Standard Test Procedure for Thermal Evaluation of Oil-Immersed Distribution Transformers // Institute of Electrical and Electronics Engineers
Pubbl/distr/stampa	New York, New York : , : IEEE, , 1986
ISBN	0-7381-0837-5
Descrizione fisica	1 online resource (12 pages)
Disciplina	621.3192
Soggetti	Electric lines - Testing Electric insulators and insulation - Testing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	The object of this test procedure is to establish a uniform method for investigating the effect of operating temperature on the life expectancy of oil-immersed distribution transformers. It is intended to give a direct evaluation of the composite insulation system of an oil-immersed distribution transformer, tested as an integral unit. It is to be noted that the oil in which the transformer is immersed is to be considered a part of the insulation system. It is the intent of the procedure to provide that each component of the insulation structure operate during the test under conditions that are, as nearly as possible, the same as those that it would encounter in service. Thus, it is intended that each component be evaluated in accordance with its actual function.
