Sommario/riassunto	Revision of ISO/IEC 15288-2004. This International Standard was jointly developed by ISO/IEC and IEEE. This International Standard establishes a common process framework for describing the life cycle of man-made systems. It defines a set of processes and associated terminology for the full life cycle, including conception, development, production, utilization, support and retirement. This standard also supports the definition, control, assessment, and improvement of these processes. These processes can be applied concurrently, iteratively, and recursively to a system and its elements throughout the life cycle of a system.

Sommario/riassunto	Storage, the computer's second function, has become progressively more complex to meet growing needs in terms of capacity, speed, security and energy efficiency. It takes the form of a component or system, such as a memory subset or a mass storage device.
