

1. Record Nr.	UNISA996280486003316
Titolo	IEEE Std 2402-2017 : IEEE Standard Design Criteria of Complex Virtual Instruments for Ocean Observation // Institute of Electrical and Electronics Engineers
Pubbl/distr/stampa	New York, NY, USA : , : IEEE, , 2017
ISBN	1-5044-3744-6
Descrizione fisica	1 online resource (58 pages)
Disciplina	551.460285
Soggetti	Oceanographic instruments Wave-motion, Theory of Computer-aided design
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	The framework of building a distributed ocean observing software system based on complex virtual instruments (CVIs), which are used for processing and displaying the collected data from ocean instruments and the related metadata, is defined in this standard. This framework provides the guidelines for the CVI-based development process, in which CVI structure design covers management of observed data and metadata, virtual instrument engine based on geospatial information, and service interfaces for CVI interactions. CVI mapping schemes describe the correspondence from observed objects to CVIs. CVI relations define the relationships between CVIs and describe the methods of extending and compositing multiple CVIs.
