   Sommario/riassunto   A C programming language binding for the Application Program
                        Interface (API) to directory services in IEEE Std 1224.2-1993 is defined.
                        This standard is intended for use by application developers, system
                        implementors, test method writers, and users to support application
                        portability at the source-code level. The interface is designed for
                        operational, rather than for management, interactions with a directory
                        such as knowledge management or schema management. Security
                        features are not generally visible in the interface in order to permit
                        flexibility in security policies.
