Sommario/riassunto	Rudolf Heberles Studie zeigt den sensationellen Erfolg der nationalsozialistischen Bewegung bei der Landbevölkerung Nord- und Ostdeutschlands, der ein wesentlicher Grund für den steilen Anstieg der NSDAP-Stimmen in den Jahren 1930 bis 1932 gewesen ist. Überraschend ist diese Entwicklung gerade in einem Land wie Schleswig-Holstein, das seit 1870 als traditionell liberales Bauernland galt. Der Autor hat in den Jahren 1932/33 als Privatdozent an der Universität Kiel die Gründe dieses politischen Umschwunges durch eine exakte wahlsoziologische Untersuchung nachvollzogen. Die Ergebnisse konnte er nach der "Machtergreifung" der Nationalsozialisten nicht mehr publizieren. Die Erstpublikation von 1963 wird hier nun wieder zugänglich gemacht.

Sommario/riassunto	Recent developments have increased questions about vulnerabilities in Central and Eastern European Countries (CEE) that are experiencing credit booms. This paper analyzes the role of foreign-owned banks in these credit booms. The results show that the CEE countries depend on foreign banks, and these foreign banks depend on interbank funding. Lending by foreign banks seems driven by economic growth and interest rate margins. This lending appears independent of economic but not financial conditions in the foreign bank's home country.
