

1. Record Nr.	UNISA996320243703316
Titolo	WHO Guidelines for the management of postpartum haemorrhage and retained placenta [[electronic resource]]
Pubbl/distr/stampa	Geneva, : World Health Organization, 2009
ISBN	1-282-45627-X 9786612456275 92-4-068423-9
Descrizione fisica	1 online resource (62 p.)
Collana	Nonserial Publications
Altri autori (Persone)	GulmezogluA. Metin
Soggetti	Labor (Obstetrics) - Complications Placenta - Diseases Uterine hemorrhage Maternity nursing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	WHO guidelines for the management of postpartum haemorrhage and retained placenta; Contents; Background; Methods; Scope of the guidelines; Evidence and recommendations; PPH care pathways; Research implications; Plans for local adaptation of these recommendations; Plans for supporting implementation of these recommendations; GRADE tables; References; Annex 1. Scoping document with average scores; Annex 2. Search strategy; Annex 3. GRADE methodology; Annex 4. List of participants
Sommario/riassunto	Effective treatment of postpartum haemorrhage (PPH) often requires simultaneous multidisciplinary interventions. The health care provider needs to begin resuscitative efforts quickly, establish the cause of the haemorrhage, and possibly obtain the assistance of other care providers, such as an obstetrician, anaesthetist or radiologist. Avoiding delays in diagnosis and treatment will have significant impact on sequelae and chance of survival. These guidelines therefore include care pathways for the management of PPH, as a practical guide for clinicians. A loose-leaf insert of these care pathways
