| Sommario/riassunto      | The fully open access Journal of Cybersecurity publishes accessible articles describing original research in the inherently interdisciplinary world of computer, systems, and information security. The journal is premised on the belief that computer science-based approaches, while necessary, are not sufficient to tackle cybersecurity challenges. Instead, scholarly contributions from a range of disciplines are needed to understand the human aspects of cybersecurity. Journal of Cybersecurity provides a hub around which the interdisciplinary cybersecurity community can form, and is committed to providing quality conceptual and empirical research, as well as scholarship, that is grounded in real-world implications and solutions. |
