Constantine succeeded in propelling this minority religion to imperial status using the traditional tools of governance, yet his proclamation of

his new religious orientation was by no means unambiguous. His coins

and inscriptions, public monuments, and pronouncements sent unmistakable signals to his non-Christian subjects that he was willing not only to accept their beliefs about the nature of the divine but also to incorporate traditional forms of religious expression into his own self-presentation. In Constantine and the Cities, Noel Lenski attempts to reconcile these apparent contradictions by examining the dialogic nature of Constantine's power and how his rule was built in the space between his ambitions for the empire and his subjects' efforts to further their own understandings of religious truth. Focusing on cities and the texts and images produced by their citizens for and about the emperor. Constantine and the Cities uncovers the interplay of signals between ruler and subject, mapping out the terrain within which Constantine nudged his subjects in the direction of conversion. Reading inscriptions, coins, legal texts, letters, orations, and histories, Lenski demonstrates how Constantine and his subjects used the instruments of government in a struggle for authority over the religion of the empire.
