Nota di contenuto	The Freiburg English Dialect Project and corpus / Bernd Kortmann, Susanne Wagner -- Relative clauses in English dialects of the British Isles / Tanja Hermann -- "Some do and some doesn't" : verbal concord variation in the north of the British Isles / Lukas Pietsch -- Gender in English pronouns : southwest England / Susanne Wagner
Sommario/riassunto	This volume offers qualitative as well as corpus-based quantitative studies on three domains of grammatical variation in the British Isles. All studies draw heavily on the Freiburg English Dialect Corpus (FRED), a computerized corpus for predominantly British English dialects comprising some 2.5 million words. Besides an account of FRED and the advantages which a functional-typological framework offers for the study of dialect grammar, the volume includes the following three substantial studies. Tanja Herrmann's study is the first systematic cross-regional study of relativization strategies for Scotland, Northern Ireland, and four major dialect areas in England. In her research design Hermann has included a number of issues crucial in typological

research on relative clauses, above all the Noun Phrase Accessibility Hierarchy. Lukas Pietsch investigates the so-called Northern Subject Rule, a special agreement phenomenon known from Northern England, Scotland and Northern Ireland. His study is primarily based on the Northern Ireland Transcribed Corpus of Speech, but also on the FRED and SED data (Survey of English Dialects) for the North of England. Susanne Wagner is concerned with the phenomenon of pronominal gender, focussing especially on the typologically rather unique semantic gender system in the dialects of Southwest England. This volume will be of interest to dialectologists, sociolinguists, typologists, historical linguists, grammarians, and anyone interested in the structure of spontaneous spoken English.

Sommario/riassunto

The theory of set-valued maps and of differential inclusion is developed in recent years both as a field of his own and as an approach to control theory. The book deals with the theory of semilinear differential inclusions in infinite dimensional spaces. In this setting, problems of interest to applications do not suppose neither convexity of the map or compactness of the multi-operators. These assumption implies the development of the theory of measure of noncompactness and the construction of a degree theory for condensing mapping. Of particular interest is the approach to the case when the linear part is a generator of a condensing, strongly continuous semigroup. In this context, the existence of solutions for the Cauchy and periodic problems are proved as well as the topological properties of the solution sets. Examples of applications to the control of transmission line and to hybrid systems are presented.
