Sommario/riassunto	This thoughtful new work begins by asking the question 'what is normal in cognitive and pathological ageing?' The clinician's experience of dementia and mild cognitive impairment suggests that these conditions present in a variety of forms and progress at different rates, with a spectrum of disability ranging from a barely perceptible loss of mental acuity to the severe debilitation of advanced Alzheimer's disease. This atlas utilizes diagnostic imaging, histopathological findings, schematic diagrams and other graphics to illustrate the symptom profiles, etiology, and epidemiology of the more
