Sommario/riassunto

Based on pioneering work at their school in Sheffield, the authors of this book explore the universal issues of access and inclusion in employment and education for children and young people with autism or Asperger's Syndrome. They describe the challenges they faced in establishing and running an Integrated Resource for these children within a mainstream secondary school. The twenty-four pupils at The Resource participate in the regular school curriculum, but also learn a wide range of additional life skills. These include road safety, work-place skills and using public transport as well as ex

Sommario/riassunto

The book is an amazing collection of technical papers dealing with hybrid rockets. Once perceived as a niche technology, for about a decade, hybrid rockets have enjoyed renewed interest from both the propulsion technical community and industry. Hybrid motors can be used in practically all applications where a rocket is employed, but there are certain cases where they present a superior fit, such as

sounding rockets, tactical missile systems, launch boosters and the emerging field of commercial space transportation. The novel space tourism business, indeed, will benefit from their safety and lower recurrent development costs. The subjects addressed in the book include the cutting edge technology employed to push forward this relatively new propulsion concept, spanning systems to improve fuel regression rate, control of the mixture ratio to optimize performance, computational fluid dynamics applied to the simulation of the internal ballistics, and some other novel system applications.
