Sommario/riassunto	Signs orient, inform, persuade, and regulate. They help give meaning to our natural and human-built environment, to landscape and place. In Signs in America's Auto Age, cultural geographer John Jakle and historian Keith Sculle explore the ways in which we take meaning from outdoor signs and assign meaning to our surroundings-the ways we "read" landscape. With an emphasis on how the use of signs changed as the nation's geography reorganized around the coming of the automobile, Jakle and Sculle consider the vast array of signs that have evolved since the beginning of the twentieth century.

Sommario/riassunto	With the Soviet Union's launch of the first Sputnik satellite in 1957, the Cold War soared to new heights as Americans feared losing the race into space. The X-15 Rocket Plane tells the enthralling yet little-known story of the hypersonic X-15, the winged rocket ship that met this challenge and opened the way into human-controlled spaceflight. Drawing on interviews with those who were there, Michelle Evans captures the drama and excitement of, yes, rocket science: how to handle the heat generated at speeds up to Mach 7, how to make a rocket propulsion system that could throttle, and how to s
