rerum.

Sommario/riassunto

This study examines the scientific interests and rationality which find expression in the quadrivial sources of the 9th to 11th centuries, arguing on this basis for the existence of a 'discovery of nature' already prior to the 12th century. It focuses on the theme of 'time', exemplified by Abbo of Fleury's Computus, as well as Hermann of Reichenau's Epistola de quantitate mensis lunaris, Abbreviatio compoti and Prognostica. The systematic and historical background of the study is established through analysis of Alcuin's De vera philosophia, Bede's De temporum ratione and the computistic-astronomical anthologies which were the predominant genre during this period. The volume is complemented by fourteen illustrations and an appendix including Hermann's heretofore unedited texts, the Abbreviatio compoti and Prognostica.

Sommario/riassunto	Middle income countries (MICs) are facing rapidly evolving development challenges as their economies mature and integrate into the global economy. As a group, the 86 MICs account for about one -- fifth of world output, and their per capita income has grown by almost 4 percent annually since 1995. Yet there are still home to one -- third of the world's poorest citizens, living on less than 2 per day. The World Bank has provided US\$163 billion in loans to these countries since 1995 and it allocates about half of its administrative budget to working with them. Today, as a group these countries h
