Sommario/riassunto	<p>Nearly 1.9 million U.S. troops have been deployed to Afghanistan and Iraq since October 2001. Many service members and veterans face serious challenges in readjusting to normal life after returning home. This initial book presents findings on the most critical challenges, and lays out the blueprint for the second phase of the study to determine how best to meet the needs of returning troops and their families. The statement of task for this study evolved out of discussions among the Department of Defense (DOD), the Department of Veterans Affairs (VA), and IOM. Specifically, it was determined that in phase 1, the IOM committee would identify preliminary findings regarding the physical and mental health and other readjustment needs for members and former members of the Armed Forces who were deployed to OEF or OIF and their families as a result of such deployment.</p>
