| Titolo                  | The doctrine of the Sabbath [[electronic resource] ] : Wherein the first institution of the vweekly Sabbath, with the time thereof, the nature of the law binding man to keep it, the true ground, and necessity of the first institution, and of the observation of it, on the severall day in the Old Testament, and also of the moving of it to the first day under the Gospel, are laid open and proved out of the Holy Scriptures. Also besides the speciall dueties necessarily required for the due sanctification thereof, those two profitable points are proved by demonstrations out of Gods Word. First, that the Lord Christ God and man, is the Lord of the Sabbath, on whom the Sabbath was first founded...2. That the faithfull under the Gospell are as necessarily bound to keep the weekly Sabbath of the Lords day... Deliverd in divers sermons by George Walker B. of Divinity and pastor of St. Iohn Evangelists Church in London |

## Sommario/riassunto

Writing in English, German, or French, more than 300 authors provide a historical description of the beginnings and of the early and subsequent development of thinking about language and languages within the relevant historical context. The gradually emerging institutions concerned with the study, organisation, documentation, and distribution are considered as well as those dealing with the utilisation of language related knowledge. Special emphasis has been placed on related disciplines, such as rhetoric, the philosophy of language, cognitive psychology, logic and neurological science.

| Nota di contenuto       | PATTERNS AND MECHANISMS: Mosaicism as a Biological Concept: -- History -- Mosaicism in Plants, Animals, Humans -- Mosaicism Versus Chimerism -- The Mechanisms of Mosaicism -- Genomic Mosaicism of Autosomes -- Epigenetic Mosaicism of autosomes -- Genomic Mosaicism of X Chromosomes -- Epigenetic Mosaicism of X Chromosomes -- The patterns of Mosaicism -- Lines of Blaschko -- Checkerboard Pattern -- Phylloid Pattern -- Patchy Pattern Without Midline Separation -- Lateralization -- Other Patterns, so far Unclassifiable -- MOSAIC SKIN DISORDERS: Nevi -- Melanocytic Nevi -- Other Forms of Pigmentary Mosaicism -- Epidermal Nevi -- Vascular Nevi -- Connective Tissue Nevi -- Nevoid Skin Disorders -- Lyonization (Functional X-Chromosome Mosaicism) in X-Linked Skin Disorders -- Autosomal Non-Nevi -- Neoplastic Skin Lesions -- Benign Tumors -- Malignant Tumors -- CONCLUSION. |
| Sommario/riassunto      | Mosaicism is a powerful biologic concept, originally developed from the study of plants and animals, and is the necessary basis for the explanation of numerous human skin disorders. This lavishly                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

illustrated book presents, for the first time, a comprehensive overview of the strikingly manifold patterns and peculiarities of mosaic skin disorders. It is structured in a straightforward, reader-friendly way that will help the dermatologist to understand the underlying molecular mechanisms of skin disorders in order to further improve the treatment outcome. The first two parts of the book are devoted to the mechanisms and patterns of cutaneous mosaicism, with explanation of genomic and epigenetic mosaicism and description of the six archetypal patterns, including the lines of Blaschko, as well as less well defined or as yet unclassifiable patterns. In the third part, the various mosaic skin disorders are examined in depth, including nevi, allelic and non-allelic didymosis, other binary genodermatoses, mosaic manifestations of autosomal dominant skin disorders, and nevoid skin disorders. The book concludes with a note on neoplastic skin lesions, examining models of tumorigenesis.
