	Titolo	A way to get wealth [[electronic resource]] : containing the six principall vocations or callings, in which everie good husband or house-wife may lawfully imploy themselves. As first, the natures, ordering, curing, breeding, choice, use, and feeding of all sorts of cattle and fowle ... Secondly, the knowledge, use, and laudable practice of all the recreations meete for a gentleman. Thirdly, the office of the housewife ... Fourthly, the enrichment of the weald in Kent. Fiftly, the husbanding, and enriching of all sorts of barraine grounds ... Sixtly, the making of orchards ... The first five bookes gathered by G.M. The last by Master W.L. for the benefit of great Britane

	Sommario/riassunto	The book is devoted to recent research in the global variational theory on smooth manifolds. Its main objective is an extension of the classical variational calculus on Euclidean spaces to (topologically nontrivial) finite-dimensional smooth manifolds; to this purpose the methods of global analysis of differential forms are used. Emphasis is placed on the foundations of the theory of variational functionals on fibered manifolds - relevant geometric structures for variational principles in

geometry, physical field theory and higher-order fibered mechanics. The book chapters include: - foundations of jet bundles and analysis of differential forms and vector fields on jet bundles, - the theory of higher-order integral variational functionals for sections of a fibred space, the (global) first variational formula in infinitesimal and integral forms- extremal conditions and the discussion of Noether symmetries and generalizations,- the inverse problems of the calculus of variations of Helmholtz type- variational sequence theory and its consequences for the global inverse problem (cohomology conditions)- examples of variational functionals of mathematical physics. Complete formulations and proofs of all basic assertions are given, based on theorems of global analysis explained in the Appendix.
