Sommario/riassunto	Marx and Singularity by Luca Basso attempts to understand the development of Marx's thought, from the early writings to the Grundrisse , as a search for individual realisation. Drawing upon the concept of singularity in contemporary French theory, and problematising its relation to Marx's vocabulary, this book challenges organicist interpretations of Marx's early work. The productivity of the notion of singularity is argued to be based on the fact that it allows us to highlight the element of individual realisation, stressing at the same time its distance from the modern conception of individuality. The "correlate" of singularity is the reciprocity, moving and unstable, between the "individual" and the "collective", which occurs in class struggles. Updated and revised edition of Socialità e isolamento: la singolarità in Marx published by Carocci in 2008.

## Sommario/riassunto

Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence, and actuations are emerging as a critically important disruptive computer class based on a new platform, networking structure and interface that enable novel, low-cost and high-volume applications. Several of such applications have been difficult to realize because of many interconnection problems. To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks. This book covers the theory, design and applications of computer networks, distributed computing, and information systems. The aim of the book "Advanced Information Networking and Applications" is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications.
