| Nota di bibliografia    | Includes bibliographical references.   |
| Sommario/riassunto      | This handbook presents the data of 5-component metallic amorphous alloys, including a large number of specimen obtained by adding a 5-th   |

component to a quaternary alloy, some were obtained by starting from lower component base alloys, and there are a few examples of so-called high-entropy alloys. It contributes both to fundamental researches and industrial applications.
