Sommario/riassunto

This book contains the Proceedings of the Fifth Meeting on CPT and Lorentz Symmetry, held at Indiana University in Bloomington from June 28 to July 2, 2010. The Meeting focused on tests of these fundamental symmetries and on related theoretical issues, including scenarios for possible violations. Topics covered at the meeting include searches for CPT and Lorentz violations involving: birefringence and dispersion from cosmological sources, clock-comparison measurements, CMB polarization, electromagnetic resonant cavities, equivalence principle, gauge and Higgs particles, high-energy astrophysics

Sommario/riassunto

This book attempts to answer two simple questions: do governments link the calculation of taxable business profits to the profit or loss resulting from applying accounting rules? Moreover, does it make sense to do so? The detailed responses to these two questions are provided in the general report and the 25 national reports that form its foundation. Additionally, the book analyses various cross-cutting aspects of the topic, including its constitutional dimension, its intersections with EU law, its prospects in recent initiatives for the internationalization of corporate taxation and its procedural implications.
