1. Record Nr. UNISA996395856203316

Autore	Pocklington John
Titolo	Altare Christianum: or, The dead vicars plea [[electronic resource]] : Wherein the vicar of Gr. being dead, yet speaketh, and pleadeth out of antiquity, against him that hath broken downe his altar. Presented, and humbly submitted to the consideration of his superiours, the governours of our Church. By Iohn Pocklington. Dr. D
Pubbl/distr/stampa	London, : Printed by Richard Badger, 1637
Descrizione fisica	[8], 163, [1] p
Soggetti	Altars
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	A reply to "A coale from the altar" by Peter Heylyn, and to a letter by John Williams to the vicar at Grantham. Variant: hand stamped in red ink below the imprint: Are to be sould by N: Vavasour at his shopp in the Inner Temple:. Reproduction of the original in the British Library.
Sommario/riassunto	eebo-0018

2. Record Nr. UNIORUON00072219

Autore	ISTITUTO DI RICERCHE ECONOMICHE E SOCIALI DEL PIEMONTE
Titolo	Uguali e diversi : Il mondo culturale, le reti di rapporti, i lavori degli immigrati non europei a Torino / Istituto Ricerche Economino-Sociali del Piemonte (IRES)
Pubbl/distr/stampa	Torino, : Rosenberg & Sellier, c.1992
ISBN	88-7011-486-4
Descrizione fisica	xii,289 p. ; 25 cm
Disciplina	325.1
Soggetti	Europa - Immigrazione
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

3. Record Nr. UNINA9911019231103321

Autore	Green Phil
Titolo	Fundamentals and Applications of Colour Engineering
Pubbl/distr/stampa	Newark : , : John Wiley & Sons, Incorporated, , 2023 ©2024
ISBN	9781119827207 9781119827214 9781119827184
Edizione	[1st ed.]
Descrizione fisica	1 online resource (400 pages)
Collana	Wiley Series in Display Technology Series
Disciplina	535.6
Soggetti	Color Flat panel displays
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia

Nota di contenuto

Intro -- Fundamentals and Applications of Colour Engineering -- Contents -- Series Editor's Foreword -- Preface -- Introductory Notes -- 1 Instruments and Methods for the Colour Measurements Required in Colour Engineering -- 1.1 Introduction -- 1.1.1 The Need for Colorimetry -- 1.1.2 The Principles of Colorimetry -- 1.1.3 Making the Transition from What We "See" to Quantifying How We "Match" a Colour -- 1.2 Visual Colorimetry -- 1.2.1 A Method to Uniquely Map the Colour of Lights and Objects -- 1.2.2 Development of the CIE Method of Visual Colorimetry -- 1.2.3 Applications of Visual Colorimetry -- 1.2.4 Disadvantages of Visual Colorimetry -- 1.3 Analogue Simulation of Visual Colorimetry -- 1.3.1 Replacing the Human Eye with an Optoelectronic Sensor -- 1.3.2 Substituting Coloured Filters to Approximate the CIE Colour-Matching Functions -- 1.3.3 Assessing the "Goodness of Fit" of a Set of Colorimeter Filters -- 1.3.4 Schematic Description of Analogue Filter Colorimeters -- 1.3.5 Disadvantages of Analogue Filter Colorimeters -- 1.4 Digital Simulation of Visual Colorimetry -- 1.4.1 Replacing the Analogue Filters with an Abridged Spectrometer -- 1.4.2 Assessing the "Goodness of Fit" of Abridged Spectrometers -- 1.4.3 Schematic Description of Digital Spectrocolorimeters -- 1.4.4 Advantages and Disadvantages of Digital Spectrocolorimeters -- 1.5 Selecting and Using Colorimeters and Spectrocolorimeters -- 1.5.1 Reading and Understanding Specifications and Technical Literature -- 1.5.2 Verifying Performance Specifications -- 1.5.3 Standards of Colour and Colour-difference -- 1.5.4 Sources of Error and Uncertainty in the Measurement of Reflectance, Transmittance and Radiance -- 1.6 Geometric Requirements for Colour Measurements -- 1.6.1 Colour Measurements from Self-Luminous Objects -- 1.6.2 Colour Measurements from Reflecting or Transmitting Objects.
1.7 Conclusions and Expectations -- 1.7.1 Current CIE and ISO Activities in Colour and Colour-difference Measurements -- 1.7.2 Quality Management Systems and Colour Measurements -- References -- 2 Colorimetry and Colour Difference -- 2.1 Introduction -- 2.2 Colorimetry -- 2.3 Normalization -- 2.4 Colour Matching Functions -- 2.5 Illuminants -- 2.6 Data for Observers and Illuminants -- 2.7 Range and Interval -- 2.8 Calculation of Chromaticity -- 2.9 Calculation of CIE 1976 Uniform Colour Spaces -- 2.10 Inversion of CIELAB Equations -- 2.11 Colour Difference -- 2.12 Problems with Using UCS Colour Difference -- 2.13 Uniformity of the Components of Colour Difference -- 2.13.1 Chroma -- 2.13.2 Hue -- 2.13.3 Lightness -- 2.14 Viewing Conditions -- 2.15 Surface Characteristics -- 2.16 Acceptability of Colour Differences -- 2.17 Overcoming the Limitations of UCS Colour Difference with Advanced Colour Difference Metrics -- 2.18 CIE94 -- 2.19 CIEDE2000 -- 2.20 Progress on Colour Difference Metrics since CIEDE2000 -- 2.21 3D Colour Difference -- 2.22 Colour Difference in High Luminance Conditions -- 2.23 Colour Difference Formulas Based on Colour Appearance Models -- 2.24 Limitations in the Use of Advanced Colour Difference Metrics in Colour Imaging -- 2.25 Basis Conditions -- 2.25.1 Illuminant -- 2.25.2 Illuminance -- 2.25.3 Sample Separation -- 2.25.4 Sample Size and Image Structure -- 2.26 Colour Difference in Complex Images -- 2.27 Acceptability and Perceptibility -- 2.28 Large vs Small Differences -- 2.29 Deriving Colour Difference Tolerances -- 2.30 Sample Preparation -- 2.31 Psychophysical Experiments -- 2.31.1 Observer Variability and Experience -- 2.32 Colour Difference Judgements by Observers with a Colour Vision Deficiency -- 2.33 Calculating Colour Tolerances from Experimental Data.
2.34 Calculation of Discrimination Ellipsoids and Tolerance

Distributions -- 2.34.1 Calculation of Parametric Constants in Weightings Functions -- 2.35 Calculation of Acceptability Thresholds -- 2.36 Evaluating Colour Difference Metrics -- 2.37 Conclusion -- References -- 3 Fundamentals of Device Characterization -- 3.1 Introduction -- 3.1.1 Objectives -- 3.2 Characterization Methods -- 3.2.1 Test Charts -- 3.2.2 Calibration -- 3.2.2.1 Matching Aim Values -- 3.2.2.2 Optimizing Performance -- 3.2.2.3 Perceptual Uniformity of Device Values -- 3.2.2.4 Optimization for Machine Vision -- 3.2.3 Linearization -- 3.3 Numerical Models -- 3.3.1 Regression Methods Used in Characterization -- 3.3.1.1 First Order Model -- 3.3.1.2 Higher Order Models -- 3.3.1.3 Choosing the Polynomial Order -- 3.3.1.4 Spline Methods -- 3.3.1.5 Weighted Regression -- 3.3.2 Domain -- 3.3.3 Optimization -- 3.3.4 Noisy and Discontinuous Data -- 3.3.5 Machine Learning -- 3.4 Look-Up Tables with Interpolation -- 3.4.1 Packing -- 3.4.2 Extraction -- 3.4.3 Interpolation -- 3.4.4 LUT Implementation -- 3.4.4.1 LUT implementation in ICC profiles -- 3.5 Evaluating Accuracy - Training and Test Data -- References -- 4 Characterization of Input Devices -- 4.1 Input Channels -- 4.2 Characterization Goals -- 4.3 Transform Encoding -- 4.4 Dynamic Range -- 4.5 Input Characterization Methods -- 4.5.1 Scanners -- 4.6 Targets -- 4.7 Modelling -- 4.7.1 Digital Cameras -- 4.8 Target-Based Characterization -- 4.9 Targets -- 4.10 Modelling -- 4.10.1 Spectral Sensitivity-based Methods -- 4.10.2 Machine Learning Methods -- 4.10.3 Spectral Characterization of Input Devices -- References -- 5 Color Processing for Digital Cameras -- 5.1 Introduction -- 5.2 Basics of a Camera Sensor -- 5.3 The Camera Pipeline -- 5.3.1 Defective Pixel Correction -- 5.3.2 Black-Level Correction and Normalization. 5.3.3 Lens Shading Correction -- 5.3.4 Autofocus, Autoexposure, Auto White Balance -- 5.3.4.1 Autoexposure -- 5.3.4.2 Autofocus -- 5.3.5 White Balance and Auto White Balance -- 5.3.5.1 White Balance -- 5.3.5.2 Manual and Auto White Balance -- 5.3.6 Demosaicing -- 5.3.7 Noise Reduction -- 5.3.8 Color Space Transform to Device-Independent Color Space -- 5.3.9 Photo-Finishing/Rendering -- 5.3.9.1 General and Selective Color Manipulation -- 5.3.9.2 Global and Local Tone-Mapping -- 5.3.9.3 Sharpening/Noise and Grain -- 5.3.9.4 Image Resizing/Super-Resolution -- 5.3.10 Color Mapping to Final Image Encoding Color Space -- 5.3.11 Compression and Save to Storage -- 5.3.12 RAW Image Capture -- 5.4 Multi-Frame Processing -- 5.4.1 HDR Imaging -- 5.4.2 Low-Light/Night-Mode Imaging -- 5.5 Towards the Neural ISP -- 5.6 Concluding Remarks -- Acknowledgment -- References -- 6 Display Calibration -- 6.1 Introduction -- 6.2 From CRT to Contemporary Display Technologies -- 6.3 The Display Never Sleeps… Merging Television and Computer Display Standards -- 6.4 The Evolution of Display Calibration Capabilities -- 6.4.1 Gamut Mapping -- 6.4.2 Manual Calibration -- 6.4.3 One Dimensional Lookup -- 6.3.4 The Matrix Shaper Architecture -- 6.4.5 Single 3-Dimensional LUT -- 6.4.5.1 3DLUT Considerations -- 6.4.6 Hybrid Matrix Shaper Utilizing 3DLUT Followed by a 1DLUT -- 6.5 Measurement Set Requirements -- 6.5.1 Pattern Generation -- 6.5.2 How Many Measurements are Needed? -- 6.5.3 Methods to Mitigate Drift in Display Measurements -- 6.6 Calibration Validation Methodologies -- 6.6.1 Numerical Scales -- 6.6.2 Visual Evaluation Targets and Methods -- 6.7 Low Blue Light Developments -- 6.8 Conclusions -- References -- 7 Characterizing Hard Copy Printers -- 7.1 Introduction -- 7.2 Properties of Hard Copy Printers -- 7.3 Substrates and Inks -- 7.3.1 Fluorescent Whitening Agents. 7.3.2 Inks -- 7.4 Colour Gamut -- 7.5 Halftoning -- 7.6 Mechanical Printing Systems -- 7.7 Printing Conditions -- 7.8 Digital Systems --

7.9 RGB Printers -- 7.10 Test Charts -- 7.11 Printer Models -- 7.12 Block Dye Model -- 7.13 Physical Models -- 7.13.1 Density -- 7.13.2 Dot Area Models -- 7.13.2.1 Murray-Davies -- 7.13.2.2 Yule-Nielsen -- 7.13.2.3 Clapper-Yule -- 7.13.2.4 Additivity Failure -- 7.13.3 Neugebauer -- 7.13.3.1 Modified and Extended Neugebauer Equations -- 7.13.3.2 N-Modified Neugebauer Equations -- 7.13.4 Vector-Corrected Neugebauer Equations -- 7.13.4.1 Cellular Extensions -- 7.13.4.2 Spectral Extensions -- 7.13.4.3 Evaluation of Different Forms of the Neugebauer Equations -- 7.13.5 Colorant Models -- 7.13.5.1 Masking Equations -- 7.13.6 Beer-Bouguer -- 7.13.7 Kubelka-Munk -- 7.13.8 Extensions -- 7.14 Numerical Models and Look-up Tables -- 7.14.1 Black Printer -- 7.14.1.1 Spectral Grey-Component Replacement -- 7.14.1.2 Black Generation Algorithm -- 7.15 Inverting the Model -- 7.16 Multi-Colour and Spot Colour Characterization -- 7.17 Spectral Characterization -- 7.18 White Ink -- 7.19 Reducing the Frequency of Characterization -- 7.20 Conclusions -- References -- 8 Colour Encodings -- 8.1 Introduction -- 8.2 Colour Encoding Components -- 8.3 Colour Spaces -- 8.4 Device and Colour Space Encodings -- 8.5 Colorimetric Interpretation -- 8.6 Image State -- 8.7 Standard 3-Component Colour Space Encodings -- 8.8 Colour Gamut -- 8.8.1 Extended Colour Gamut -- 8.9 Precision and Range -- 8.9.1 High Dynamic Range -- 8.9.2 Negative Values -- 8.10 Luminance/Chrominance Encodings -- 8.11 Conversion to Colorimetry -- 8.12 Implementation Issues -- 8.13 File Formats -- References -- 9 Colour Gamut Communication -- 9.1 Introduction -- 9.1.1 Device Colour Gamut and the Usable Colour Gamut -- 9.1.2 Colour Space -- 9.1.3 Factors Affecting Colour Gamut.
9.1.4 Gamut of an Image.

Sommario/riassunto

"The Wiley SID book series organizers and our editorial team believe that there is a strong need in the display field for a comprehensive book describing the manufacturing of the display panels used in today's display products. The objective of this book, entitled Flat Panel Display Manufacturing, is to give a broad overview for the key manufacturing topics, serving as a reference text. The book will cover all aspects of the manufacturing processes of TFT LCD and AMOLED, which includes the fabrication processes of the TFT backplane, cell process, module packaging, and test processes. Additionally, the book introduces important topics in manufacturing science and engineering related to quality control, factory and supporting systems architectures, and green manufacturing. The book can serve as a reference book not only for display engineers in the field, but also for students in display fields. One might think that flat panel display manufacturing is a mature subject, but the state of the art manufacturing technologies enabling today's high end TFT LCDs and OLED displays are still evolving for the next generation displays. The editorial team invited authors from major display manufacturers and experts in each manufacturing topic (equipment, processing, etc.). Last but not least, we are also grateful to the Wiley SID book series team, and especially to Dr. Ian Sage for help planning, reviewing the early drafts, and bringing this book to light."--
