Titolo	Meroz curse for not helping the Lord against the mightie [[electronic resource]] : Being the substance of a sermon, preached on a day of humiliation at St. Sepulchers, London, Decemb. 2, 1641 // by that powerfull and Godly divine Mr. Stephen Marshall ; published in one sheet of paper (not by the author) but by a lover of the truth, for their good especially, that are not able to buy bigger bookes. Being a very seasonable subject, wherein all that either out of policie or sloth, refuse to helpe the Lord, may see their danger and they that are willing are called, and directions given to them both what manner of persons they ought to be, and what they ought to doe [sic] to help the Lord. Wherein also every true Christian may see, that though they be never so weake or poore, yet they may and ought to helpe the Lord, and by what meanes

Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	History -- Mathematics -- Applications.
Sommario/riassunto	This book operationalizes the idea of political representation, which is fundamental to modern democracies. Both individual representatives and representative bodies are evaluated using the indices of popularity (the average percentage of the population whose opinion is represented on topical policy issues) and universality (the percentage of issues for which the prevailing public opinion is represented). Viewed as objective functions, these indices can aid in the search for optimal representatives and representative bodies. By replacing the consistency analysis of the social choice axioms with the calculation of the best compromises, the paradoxes of social choice, such as those of Condorcet and Arrow, can be overcome. These indices also form the core of an alternative election method that is aimed at enhancing policy representation — a recent concept of political representation, which is not supported by the conventional voting systems shaped during the American and French Revolutions. This method is tested in a series of

election experiments that focus on implementation details. In addition, non-societal applications such as MCDM, finance or traffic control are considered, where the objects that reflect the properties or behavior of other objects are regarded as their “representatives.” Given its scope, the book will appeal to political scientists, economists and operations researchers, as well as to politicians interested in improving democratic performance and electoral system design.
