

1. Record Nr.	UNISA996418448703316
Autore	Boskoff Wladimir-Georges
Titolo	A Mathematical Journey to Relativity [[electronic resource]] : Deriving Special and General Relativity with Basic Mathematics / / by Wladimir-Georges Boskoff, Salvatore Capozziello
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020
ISBN	3-030-47894-7
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (412 pages)
Collana	UNITEXT for Physics, , 2198-7882
Disciplina	530.110151
Soggetti	Physics Gravitation Mathematical physics Quantum physics Differential geometry Mathematical Methods in Physics Classical and Quantum Gravitation, Relativity Theory Theoretical, Mathematical and Computational Physics Quantum Physics Differential Geometry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Euclidean and Non--Euclidean Geometries: How they appear -- 2. Basic Facts in Euclidean and Minkowski Plane Geometry -- 3. Geometric Inversion, Cross Ratio, Projective Geometry and Poincaré Disk Model -- 4. Surfaces in 3D-Spaces -- 5. Basic Differential Geometry -- 6. Non-Euclidean Geometries and their Physical Interpretation -- 7. Gravity in Newtonian Mechanics -- 8. Special Relativity -- 9. General Relativity and Relativistic Cosmology -- 10. A Geometric Realization of Relativity: The Affine Universe and de Sitter Spacetime.
Sommario/riassunto	This book opens with an axiomatic description of Euclidean and non-Euclidean geometries. Euclidean geometry is the starting point to understand all other geometries and it is the cornerstone for our basic

intuition of vector spaces. The generalization to non-Euclidean geometry is the following step to develop the language of Special and General Relativity. These theories are discussed starting from a full geometric point of view. Differential geometry is presented in the simplest way and it is applied to describe the physical world. The final result of this construction is deriving the Einstein field equations for gravitation and spacetime dynamics. Possible solutions, and their physical implications are also discussed: the Schwarzschild metric, the relativistic trajectory of planets, the deflection of light, the black holes, the cosmological solutions like de Sitter, Friedmann-Lemaître-Robertson-Walker, and Gödel ones. Some current problems like dark energy are also sketched. The book is self-contained and includes details of all proofs. It provides solutions or tips to solve problems and exercises. It is designed for undergraduate students and for all readers who want a first geometric approach to Special and General Relativity.
