1. Record Nr. UNISA996426333503316

Autore	Kaminow Ivan P
Titolo	Optical fiber tecommunications VIB [[electronic resource]] : systems and networks / / Ivan P. Kaminow, Tingye Li, Alan W. Willner
Pubbl/distr/stampa	Oxford, England, : Academic Press, c2013
ISBN	0-12-397237-X
Edizione	[6th ed.]
Descrizione fisica	1 online resource (1139 p.)
Collana	Optics and Photonics
Altri autori (Persone)	LiTingye WillnerAlan W
Disciplina	621.382/75
Soggetti	Optical fiber communication Optical fiber communication - Equipment and supplies Fiber optics Telecommunication systems - Management Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Half Title; Dedication; Title Page; Copyright; Dedication 2; Contents; Preface; 1 Fiber Nonlinearity and Capacity: Single-Mode and Multimode Fibers; 1.1 Introduction; 1.2 Network Traffic and Optical Systems Capacity; 1.3 Information Theory; 1.3.1 Basic concepts; 1.3.2 Link to optical communication; 1.4 Single-Mode Fibers: Single Polarization; 1.4.1 Stochastic nonlinear Schrodinger equation; 1.4.2 Nonlinear capacity of standard single-mode fiber; 1.4.3 Advanced single-mode fibers; 1.4.3.1 Fiber loss; 1.4.3.2 Fiber nonlinear coefficient; 1.4.3.3 Fiber dispersion 1.4.4 Analytic formula of fiber capacity 1.5 Single-Mode Fibers: Polarization-Division Multiplexing; 1.5.1 Nonlinear propagation: stochastic Manakov equations; 1.5.2 Capacity of PDM systems; 1.6 Multicore and Multimode Fibers; 1.6.1 Types of multicore and multimode fibers; 1.6.2 Capacity scaling with the number of modes; 1.6.3 Generalized Manakov equations for multimode fibers; 1.6.4 Description of a few-mode fiber; 1.6.5 Inter-modal cross-phase modulation; 1.6.6 Inter-modal four-wave mixing; 1.7 Conclusion;

Acknowledgments; References; 2 Commercial 100-Gbit/s Coherent Transmission Systems
2.1 Introduction 2.2 Optical Channel Designs; 2.3 100G Channel-From Wish to Reality; 2.4 Introduction of 100G Channels to Service Provider Networks; 2.5 Impact of Commercial 100G System to Transport Network; 2.6 Outlook Beyond Commercial 100G Systems; 2.7 Summary; References; 3 Advances in Tb/s Superchannels; 3.1 Introduction; 3.2 Superchannel Principle; 3.3 Modulation; 3.4 Multiplexing; 3.4.1 Overview of multiplexing schemes; 3.4.2 Seamless multiplexing; 3.4.2.1 O-OFDM with single-carrier-modulated signals; 3.4.2.2 O-OFDM with OFDM-modulated signals; 3.4.3 Multiplexing with guard band
3.4.3.1 Multiplexing OFDM-modulated signals with guard band 3.4.3.2 Multiplexing Nyquist-filtered single-carrier signals with guard band; 3.5 Detection; 3.6 Superchannel Transmission; 3.6.1 Transmission based on single-carrier modulation and O-OFDM multiplexing; 3.6.2 Transmission based on OFDM modulation and O-OFDM multiplexing; 3.6.3 Transmission based on Nyquist-WDM; 3.6.4 Optimization of the spectral-efficiency-distance-product; 3.7 Networking Implications; 3.8 conclusion; Acknowledgments; Glossary; References; 4 Optical Satellite Communications; 4.1 Introduction; 4.1.1 Reduced diffraction
4.1.2 Available bandwidth4.1.3 Commercially available technologies; 4.1.4 Lasercom challenges; 4.1.4.1 Transmit channel; 4.1.4.2 Optical channel; 4.1.4.3 Receive channel; 4.2 Lasercom Link Budgets; 4.3 Laser Beam Propagation Through the Atmosphere; 4.3.1 Atmospheric attenuation; 4.3.2 Atmospheric radiance; 4.3.3 Atmospheric turbulence; 4.3.4 Turbulence mitigation approaches; 4.3.4.1 Aperture averaging effects on downlink beam; 4.3.4.2 Multibeaming for uplink; 4.3.4.3 Adaptive optics technique for downlink; 4.3.4.4 Coding of downlink and downlink transmitter
4.4 Optical Transceivers for Space Applications

Sommario/riassunto

Optical Fiber Telecommunications VI (A&B) is the sixth in a series that has chronicled the progress in the R&D of lightwave communications since the early 1970's. Written by active authorities from academia and industry, this edition brings a fresh look to many essential topics, including devices, subsystems, systems and networks. A central theme is the enabling of high-bandwidth communications in a cost-effective manner for the development of customer applications. These volumes are an ideal reference for R&D engineers and managers, optical systems implementers, university researchers and...
