 Wilson, Alan Geoffrey <1939- >

Titolo Complex spatial systems: the modelling foundations of urban and

regional analysis / Alan G. Wilson

Pubbl/distr/stampa Harlow: Pearson Education Ltd, c2000

ISBN 0.582.41896.8

Descrizione fisica VIII, 174 p.: ill.; 25 cm

Locazione DINST

Collocazione C SOP I 9

Lingua di pubblicazione Inglese

Formato Materiale a stampa

Livello bibliografico Monografia

Record Nr. UNISA996465468503316

Autore Makinson David

Titolo Sets, Logic and Maths for Computing [[electronic resource] /] / by David

Makinson

Pubbl/distr/stampa Cham:,: Springer International Publishing:,: Imprint: Springer,,

2020

ISBN 3-030-42218-6

Edizione [3rd ed. 2020.]

Descrizione fisica 1 online resource (408 pages)

Collana Undergraduate Topics in Computer Science, , 1863-7310

Disciplina 004.0151

Soggetti Computer science—Mathematics

Mathematical logic Computer mathematics Discrete mathematics

Discrete Mathematics in Computer Science Mathematical Logic and Formal Languages Computational Science and Engineering

**Discrete Mathematics** 

Mathematical Logic and Foundations

Lingua di pubblicazione Inglese

Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	Part I: Sets Collecting Things Together: Sets Comparing Things: Relations Associating One Item with Another: Functions Recycling Outputs as Inputs: Induction and Recursion Part II: Math Counting Things: Combinatorics Weighing the Odds: Probability Squirrel Math: Trees Part III: Logic Yea and Nay: Propositional Logic Something about Everything: Quantificational Logic Just Supposing: Proof and Consequence Sticking to the Point: Relevance in Logic.
Sommario/riassunto	This easy-to-understand textbook introduces the mathematical language and problem-solving tools essential to anyone wishing to enter the world of computer and information sciences. Specifically designed for the student who is intimidated by mathematics, the book offers a concise treatment in an engaging style. The thoroughly revised third edition features a new chapter on relevance-sensitivity in logical reasoning and many additional explanations on points that students find puzzling, including the rationale for various shorthand ways of speaking and 'abuses of language' that are convenient but can give rise to misunderstandings. Solutions are now also provided for all exercises. Topics and features: Presents an intuitive approach, emphasizing how finite mathematics supplies a valuable language for thinking about computation Discusses sets and the mathematical objects built with them, such as relations and functions, as well as recursion and induction Introduces core topics of mathematics, including combinatorics and finite probability, along with the structures known as trees Examines propositional and quantificational logic, how to build complex proofs from simple ones, and how to ensure relevance in logic Addresses questions that students find puzzling but may have difficulty articulating, through entertaining conversations between Alice and the Mad Hatter Provides an extensive set of solved exercises throughout the text This clearly-written textbook offers invaluable guidance to students beginning an undergraduate degree in computer science. The coverage is also suitable for courses on formal methods offered to those studying mathematics, philosophy, linguistics, economics, and political science. Assuming only minimal mathematical background, it is ideal for both the classroom and independent study. Dr. David Makinson has taught courses related to the material of this book at the American University of Beirut, King's College London and, in recent years, the London School of Economics, UK.
