

1. Record Nr.	UNISA996465509403316
Titolo	Formalization of Programming Concepts [[electronic resource]] : International Colloquium, Peniscola, Spain, April 19-25, 1981. Proceedings // edited by J. Diaz, I. Ramos
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 1981
ISBN	3-540-38654-8
Edizione	[1st ed. 1981.]
Descrizione fisica	1 online resource (X, 486 p.)
Collana	Lecture Notes in Computer Science, , 0302-9743 ; ; 107
Disciplina	005.1
Soggetti	Software engineering Computer programming Software Engineering/Programming and Operating Systems Programming Techniques
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	The algebra of functional programs: Function level reasoning, linear equations, and extended definitions -- The VDM principles of software specification & program design -- Attribute grammars : Theory and applications -- Compiler generation from formal definition of programming languages : A survey -- Formal behavioural specification of concurrent systems without globality assumptions -- A birkhoff-like theorem for algebraic classes of interpretations of program schemes -- Building data base management systems through formal specification -- Reducing types in applicative languages with structured data -- On the definition of lambda-calculus models -- About data type genericity -- On the algebraic extensions of abstract data types -- Scenarios: A model of non-determinate computation -- An operational semantics for a language with early completion data structures -- Le calcul des fermetures dans les lambda-langages -- Distributed termination with interval assertions -- Algebraic denotational semantics using parameterized abstract modules -- Relational semantics of strongly communicating sequential processes -- A construction of concurrent systems by means of sequential solutions and concurrency relations -- The development of an interpreter by means of abstract algebraic

software specifications -- A formal model of an interpreter for nonprocedural languages -- Proof theoretic methodology for propositional dynamic logic -- FP systems in edinburgh LCF -- A proposal for operational semantics and equivalence of finite asynchronous processes -- An extension to horn clause logic allowing the definition of concurrent processes -- A semantic algebra for binding constructs -- On the representation of data types -- An approach to communications and parallelism in applicative languages -- Using least fixed points to characterize formal computations of non-deterministic equations -- Formal representations for recursively defined functional programs -- Petri nets and concurrency-like relations.
