

1. Record Nr.	UNISA996465525303316
Autore	Siddiqui Mumtaz
Titolo	Grid Resource Management [[electronic resource]] : On-demand Provisioning, Advance Reservation, and Capacity Planning of Grid Resources // by Mumtaz Siddiqui, Thomas Fahringer
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2010
ISBN	1-280-38557-X 9786613563491 3-642-11579-9
Edizione	[1st ed. 2010.]
Descrizione fisica	1 online resource (XVI, 227 p.)
Collana	Theoretical Computer Science and General Issues, , 2512-2029 ; ; 5951
Classificazione	DAT 060f DAT 259f DAT 616f SS 4800
Disciplina	004.35
Soggetti	Computer networks Software engineering Computer programming Computer engineering Algorithms Application software Computer Communication Networks Software Engineering Programming Techniques Computer Engineering and Networks Computer and Information Systems Applications
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. [211]-222) and index.
Nota di contenuto	Overview -- Model -- Brokerage -- Grid Resource Management and Brokerage System -- Grid Activity Registration, Deployment and Provisioning Framework -- Planning -- Allocation Management with Advance Reservation and Service-Level Agreement -- Optimizing Multi-Constrained Allocations with Capacity Planning -- Semantics --

Semantics in the Grid: Towards Ontology-Based Resource Provisioning
-- Semantics-Based Activity Synthesis: Improving On-Demand Provisioning and Planning -- Conclusion -- Conclusion.

Sommario/riassunto

In a dynamic computing environment, such as the Grid, resource management plays a crucial role in making distributed resources available on demand to anyone from anywhere at any time without undermining the resource autonomy; this becomes an art when dealing with heterogeneous resources distributed amongst multiple trust domains spanning the Internet. Today, Grid execution environments provide abstract workflow descriptions that need a dynamic mapping to actual deployments; this further accentuates the importance of resource management in the Grid. This monograph renders boundaries of Grid resource management, identifies research challenges and proposes new solutions with innovative techniques for on-demand provisioning, automatic deployments, dynamic synthesis, negotiation-based advance reservation and capacity planning of Grid resources. Grid capacity planning is performed with multi-constrained optimized resource allocations by modeling resource allocation as an on-line strip packing problem and introducing a new solution that optimizes resource utilization and QoS while generating contention-free solutions. The book further explains the use of semantic web technologies in the Grid to specify explicit definitions and unambiguous machine interpretable resource descriptions for intelligent resource matching and synthesis; the synthesis process generates new compound resources with aggregated capabilities and prowess. The techniques introduced have been developed and integrated in the ASKALON Grid application development and runtime environment, deployed in the Austrian Grid, and are demonstrated in this book by means of well-performed experiments.
