1.	Record Nr.	UNISA996465610603316
	Titolo	Transactions on Data Hiding and Multimedia Security III [[electronic resource] /] / edited by Yun Q. Shi
	Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2008
	ISBN	3-540-69019-0
	Edizione	[1st ed. 2008.]
	Descrizione fisica	1 online resource (IX, 91 p.)
	Collana	Transactions on Data Hiding and Multimedia Security, , 1864-3043 ; ; 4920
	Disciplina	005.8
	Soggetti	Data encryption (Computer science)
		Computer security
		Management information systems
		Computer science
		Computers and civilization
		Multimedia information systems
		Algorithms
		Cryptology
		Systems and Data Security
		Management of Computing and Information Systems
		Computers and Society
		Multimedia Information Systems
		Algorithm Analysis and Problem Complexity
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Bibliographic Level Mode of Issuance: Monograph
	Nota di bibliografia	Includes bibliographical references and index.
	Nota di contenuto	Constructing Good Covering Codes for Applications in Steganography -- On the Use of Bhattacharyya Distance as a Measure of the Detectability of Steganographic Systems -- Secure Steganography Using Gabor Filter and Neural Networks -- Oracle Channels -- Quantization-Based Methods: Additive Attacks Performance Analysis.
	Sommario/riassunto	Since the mid 1990s, data hiding has been proposed as an enabling technology for securing multimedia communication, and is now used in various applications including broadcast monitoring, movie

fingerprinting, steganography, video indexing and retrieval, and image authentication. Data hiding and cryptographic techniques are often combined to complement each other, thus triggering the development of a new research field of multimedia security. Besides, two related disciplines, steganalysis and data forensics, are increasingly attracting researchers and becoming another new research field of multimedia security. This journal, LNCS Transactions on Data Hiding and Multimedia Security, aims to be a forum for all researchers in these emerging fields, publishing both original and archival research results. This third issue contains five contributions in the areas of steganography and digital watermarking. The first two papers deal with the security of steganographic systems; the third paper presents a novel image steganographic scheme. Finally, this volume includes two papers that focus on digital watermarking and data hiding. The fourth paper introduces and analyzes a new covert channel and the fifth contribution analyzes the performance of additive attacks against quantization-based data hiding methods.
