

1. Record Nr.	UNISA996465821003316
Titolo	Ubiquitous Intelligence and Computing [[electronic resource] ] : 7th International Conference, UIC 2010, Xi'an, China, October 26-29, 2010, Proceedings // edited by Zhiwen Yu, Ramiro Liscano, Guanling Chen, Daqing Zhang, Xingshe Zhou
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2010
ISBN	1-280-38980-X 9786613567727 3-642-16355-6
Edizione	[1st ed. 2010.]
Descrizione fisica	1 online resource (XVII, 696 p. 295 illus.)
Collana	Information Systems and Applications, incl. Internet/Web, and HCI ; ; 6406
Disciplina	006.3
Soggetti	User interfaces (Computer systems) Computer communication systems Artificial intelligence Computers and civilization Application software Personal computers User Interfaces and Human Computer Interaction Computer Communication Networks Artificial Intelligence Computers and Society Computer Appl. in Social and Behavioral Sciences Personal Computing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Keynote Speeches -- Programming Pervasive Spaces -- Ubiquitous Experience Media -- The Operating System for the Computer of the 21st Century -- Invited Paper -- Extracting Social and Community Intelligence from Digital Footprints: An Emerging Research Area -- Activity, Localization, and User Identification -- Smart Itinerary

Recommendation Based on User-Generated GPS Trajectories --  
Inferring User Search Intention Based on Situation Analysis of the  
Physical World -- GPS Calibrated Ad-Hoc Localization for Geosocial  
Networking -- Ontology-Enabled Activity Learning and Model Evolution  
in Smart Homes -- Support Vector Machines for Inhabitant  
Identification in Smart Houses -- Towards Non-intrusive Sleep Pattern  
Recognition in Elder Assistive Environment -- Ubiquitous Services and  
Applications -- The Making of a Dataset for Smart Spaces -- to the  
Business Processes with Ambient Media - Challenges for Ubiquitous  
and Pervasive Systems -- A Steerable Tangible Interface and Its  
Evaluation -- Alerting Accidents with Ambiguity: A Tangible Tabletop  
Application for Safe and Independent Chemistry Experiments --  
Dependency Relation Based Detection of Lexicalized User Goals --  
Identification of Gait Patterns Related to Health Problems of Elderly --  
Sensor Networks -- An Energy Efficient Localization Strategy for  
Outdoor Objects Based on Intelligent Light-Intensity Sampling -- RESS:  
A Data Dissemination Protocol Using Residual Energy and Signal  
Strength for Wireless Sensor Networks -- Design and Implementation  
of Mobile Sink Node in SDMA Applications -- RCO: A Multi-channel  
MAC Protocol with Random Cooperation for Sensor Networks -- Power  
and Bandwidth Efficiency of IEEE 802.15.4 Wireless Sensor Networks --  
Protecting Source Location Privacy in Wireless Sensor Networks with  
Data Aggregation -- Infrastructure, Middleware and Context-  
Awareness -- A Middleware for Intelligent Environments and the  
Internet of Things -- An Infrastructure for Real Objects Augmentation  
with Additional Personalized Information Services -- A Low-Cost  
Ubiquitous Family Healthcare Framework -- A Lattice-Theoretic  
Approach to Runtime Property Detection for Pervasive Context --  
Modeling Files with Context Streams -- CASPER: Mining Personalized  
Services -- Distributed Systems and Services -- A Simple Public-Goods  
Game Based Incentive Mechanism for Resource Provision in P2P  
Networks -- A Novel Framework for Service Description and Operations  
-- A Self-Adaptive Hardware/Software System Architecture for  
Ubiquitous Computing Applications -- Toward Distributed Declarative  
Control of Networked Cyber-Physical Systems -- AdContRep: A Privacy  
Enhanced Reputation System for MANET Content Services -- Context-  
Awareness Handoff Planning in Heterogeneous Wireless Networks --  
Wireless and Mobile Ad hoc Networks -- On the Improving Strategies  
upon the Route Cache of DSR in MANETs -- LALO: A Link-Aware  
Lightweight Routing Protocol for Data Delivery in Vehicular Ad Hoc  
Networks -- POCOSIM: A Power Control and Scheduling Scheme in  
Multi-Rate Wireless Mesh Networks -- Modeling Contacts and Mobility  
for Wireless Mobile Networks -- A Method to Improve Adaptability of  
the Minstrel MAC Rate Control Algorithm -- A New Location-Aware  
Hierarchical Routing Protocol for MANETs -- Special Session:  
Ubiquitous Intelligence and Services -- Towards an Efficient and  
Accurate EEG Data Analysis in EEG-Based Individual Identification --  
Activity Recognition on an Accelerometer Embedded Mobile Phone with  
Varying Positions and Orientations -- A Hybrid Content Delivery  
Approach for a Mixed Reality Web Service Platform -- Analyzing the  
Behavioral Structure Characteristics from Web Traffic -- A Smartphone-  
Based Obstacle Sensor for the Visually Impaired -- SSP: Smart Service  
Provider A Smart Environment Providing Contextual Services on Android  
Mobile Devices -- Special Track: Pervasive Social Computing -- Using  
Cohesive Subgroups for Analyzing the Evolution of the Friend View  
Mobile Social Network -- Towards Topic-Based Trust in Social  
Networks -- Mlogger: An Automatic Blogging System by Mobile Sensing  
User Behaviors -- Managing Workplace Resources in Office

Ubiquitous sensors, devices, networks and information are paving the way toward a smart world in which computational intelligence is distributed throughout the physical environment to provide reliable and relevant services to people. This ubiquitous intelligence will change the computing landscape because it will enable new breeds of applications and systems to be developed, and the realm of computing possibilities will be significantly extended. By enhancing everyday objects with intelligence, many tasks and processes could be simplified, the physical spaces where people interact, like workplaces and homes, could become more efficient, safer and more enjoyable. Ubiquitous computing, or pervasive computing, uses these many “smart things” or “u-things” to create smart environments, services and applications. A smart thing can be endowed with different levels of intelligence, and may be context-aware, active, interactive, reactive, proactive, assistive, adaptive, automated, sentient, perceptual, cognitive, autonomic and/or thinking. Research on ubiquitous intelligence is an emerging research field covering many disciplines. A series of grand challenges exists to move from the current level of computing services to the smart world of adaptive and intelligent services. Started in 2005, the series of UIC conferences has been held in Taipei, Nagasaki, Three Gorges (China), Hong Kong, Oslo and Brisbane. The proceedings contain the papers presented at the 7th International Conference on Ubiquitous Intelligence and Computing (UIC 2010), held in Xi’an, China, October 26–29, 2010. The conference was accompanied by six vibrant workshops on a variety of research challenges within the area of ubiquitous intelligence and computing.
