

1. Record Nr.	UNISA996465826403316
Titolo	Reasoning Web [[electronic resource]] : First International Summer School 2005, Msida, Malta, July 25-29, 2005, Revised Lectures // edited by Norbert Eisinger, Jan Maluszynski
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2005
Edizione	[1st ed. 2005.]
Descrizione fisica	1 online resource (X, 326 p.)
Collana	Information Systems and Applications, incl. Internet/Web, and HCI ; ; 3564
Disciplina	025.04
Soggetti	Application software Computer communication systems Information storage and retrieval Information technology Business—Data processing Computer logic Artificial intelligence Information Systems Applications (incl. Internet) Computer Communication Networks Information Storage and Retrieval IT in Business Logics and Meanings of Programs Artificial Intelligence
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"First Summer School on Reasoning Web"--P. [4] of cover.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	to Semantic Web Ontology Languages -- Rules and Ontologies in F-Logic -- Web and Semantic Web Query Languages: A Survey -- Evolution and Reactivity for the Web -- Personalization for the Semantic Web -- Attempto Controlled English: A Knowledge Representation Language Readable by Humans and Machines -- Rule Modeling and Markup -- Information Extraction for the Semantic Web -- Reuse in Semantic Applications -- Towards Types for Web Rule Languages.

This volume contains the tutorial papers of the Summer School "Reasoning Web," July 25–29, 2005 (<http://reasoningweb.org>). The School was hosted by the University of Malta and was organized by the Network of Excellence REVERSE "Reasoning on the Web with Rules and Semantics" (<http://reverse.net>), funded by the EU Commission and by the Swiss Federal Office for Education and Science within the 6th Framework Programme under the project reference number 506779. The objective of the school was to provide an introduction into methods and issues of the Semantic Web, a major endeavor in current Web research, where the World Wide Web Consortium W3C plays an important role. The main idea of the Semantic Web is to enrich Web data with meta-data carrying a "meaning" of the data and allowing Web-based systems to reason about data (and meta-data). The meta-data used in Semantic Web applications is usually linked to a conceptualization of the application domain shared by different applications. Such a conceptualization is called an ontology and specifies classes of objects and relations between them. Ontologies are defined by ontology languages, based on logic and supporting formal reasoning. Just as the current Web is inherently heterogeneous in data formats and data semantics, the Semantic Web will be inherently heterogeneous in its reasoning forms. Indeed, any single form of reasoning turns out to be insufficient in the Semantic Web.
