1. Record Nr.   UNISA996465831103316

   Titolo   Parallel Algorithms and Architectures [[electronic resource]] :
                        International Workshop Suhl, GDR, May 25-30, 1987; Proceedings / /
                        edited by Andreas Albrecht, Hermann Jung, Kurt Mehlhorn

   Pubbl/distr/stampa   Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer,
                        , 1987

   ISBN   3-540-47760-8

   Edizione   [1st ed. 1987.]

   Descrizione fisica   1 online resource (IX, 200 p.)

   Collana   Lecture Notes in Computer Science, , 0302-9743 ; ; 269

   Disciplina   004.0151

   Soggetti   Computers
                        Computation by Abstract Devices

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Note generali   Bibliographic Level Mode of Issuance: Monograph

   Nota di contenuto   Deterministic simulation of idealized parallel computers on more
                        realistic ones -- Convex hull of randomly chosen points from a
                        polytope -- Dataflow computing -- Parallel in sequence — Towards the
                        architecture of an elementary cortical processor -- Parallel algorithms
                        and static analysis of parallel programs -- Parallel processing of
                        combinatorial search trees -- An O(nlogn) cost parallel algorithm for
                        the single function coarsest partition problem -- Systolic algorithms for
                        computing the visibility polygon and triangulation of a polygonal region
                        -- RELACS — A recursive layout computing system -- Parallel linear
                        conflict-tree subtree access -- A formal definition for systolic systems
                        -- Parallel recognition of outerplanar graphs -- Solutions for the
                        distributed termination problem -- Memories for parallel subtree-
                        access -- Synapse: A multi-microprocessor lisp machine with parallel
                        garbage collector -- A note on optimal parallel transformations of
                        regular expressions to nondeterministic finite automata -- Optimal
                        parallel parsing of bracket languages -- On reliable networks from
                        unreliable gates -- Area-time tradeoffs for selection -- Optimization of
                        special permutation networks using simple algebraic relations --
                        Computing a rectilinear steiner minimal tree in $^{O(\sqrt n)}$ time --
                        What can be parallelized in computational geometry? -- A co-operative
                        programming environment for a back-end type sequential inference
