

1. Record Nr.	UNISA996465927703316
Titolo	From Web to social Web : discovering and deploying user and content profiles : Workshop on Web Mining, WebMine 2006, Berlin, Germany, September 18, 2006 : revised selected and invited papers // edited by Bettina Berendt [and three others]
Pubbl/distr/stampa	Berlin, Germany ; ; New York, New York : , : Springer, , [2007] Â©2007
ISBN	3-540-74951-9
Edizione	[1st ed. 2007.]
Descrizione fisica	1 online resource (XI, 164 p.)
Collana	Lecture notes in computer science. Lecture notes in artificial intelligence ;4737
Disciplina	006.3
Soggetti	Data mining Internet searching Internet users Web usage mining World Wide Web
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Web Mining (WebMine) 2006 was organized as part of the 17th European Conference on Machine Learning (ECML) and the 10th European Conference on Principles and Practice of Knowledge Discovery in Databases (PKDD)"--P. [x].
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	An Analysis of Bloggers, Topics and Tags for a Blog Recommender System -- Combining Web Usage Mining and XML Mining in a Real Case Study -- Extracting and Using Attribute-Value Pairs from Product Descriptions on the Web -- Discovering User Profiles from Semantically Indexed Scientific Papers -- Web Usage Mining in Noisy and Ambiguous Environments: Exploring the Role of Concept Hierarchies, Compression, and Robust User Profiles -- From World-Wide-Web Mining to Worldwide Webmining: Understanding People's Diversity for Effective Knowledge Discovery -- Aspect-Based Tagging for Collaborative Media Organization -- Contextual Recommendation.
Sommario/riassunto	The World Wide Web is a rich source of information about human behavior. It contains large amount of data organized via interconnected

Web pages, traces of information search, user feedback on items of interest, etc. In addition to large data volumes, one of the important characteristics of the Web is its dynamics, where content, structure and usage are changing over time. This shows up in the rise of related research areas like communities of practice, knowledge management, Web communities, and peer-to-peer. In particular the notion of collaborative work and thus the need of its systematic analysis become more and more important. For instance, to develop effective Web applications, it is essential to analyze patterns hidden in the usage of Web resources, their contents and their interconnections. Machine learning and data mining methods have been used extensively to find patterns in usage of the network by exploiting both contents and link structures. We have investigated these topics in a series of workshops on Semantic Web Mining (2001, 2002) at the European Conference on Machine Learning / Principles and Practice of Knowledge Discovery from Databases (ECML/PKDD) conference series, in the selection of papers for the post-proceedings of the European Web Mining Forum 2003 Workshop, published as the Springer LNAI volume 3209 "Web Mining: From Web to Semantic Web" in 2004, as well as in the Knowledge Discovery and Ontologies workshop in 2004 and in the selection of papers for the post-proceedings of the ECML/PKDD 2005 joint workshop on Web Mining (European Web Mining Forum) and on Knowledge Discovery and.
