Sommario/riassunto	This classic text provides a comprehensive, accessible overview of substance misuse and dependence with an emphasis on practical and evidence-based approaches to the assessment, management and prevention of a wide range of drug-related problems, in a variety of clinical and social settings. The book includes definitions of terms, and describes the effects and clinical characteristics of all substances of misuse. The theoretical background to these topics is clearly explained.

For the fourth edition, every chapter has been revised to include the most up-to-date information, with the latest international data on the extent of the world drug problem. There is detailed emphasis on harm minimization, AIDS and hepatitis C and entirely new coverage of tobacco addiction and its management. This is an essential guide for all healthcare workers, health policy specialists, counselors and those seeking to train in areas related to addiction and substance misuse.

Sommario/riassunto

Information Retrieval (IR) is concerned with the effective and efficient retrieval of information based on its semantic content. The central problem in IR is the quest to find the set of relevant documents, among a large collection containing the information sought, satisfying a user's information need usually expressed in a natural language query. Documents may be objects or items in any medium: text, image, audio, or indeed a mixture of all three. This book presents 12 revised lectures given at the Third European Summer School in Information Retrieval, ESSIR 2000, held at the Villa Monastero, Varenna, Italy, in September 2000. The first part of the book is devoted to the foundation of IR and related areas; the second part on advanced topics addresses various current issues, from usability aspects to Web searching and browsing.
