Nota di contenuto	Object databases and standards -- Multimedia database management: Perspectives and challenges -- Combining inheritance and parametric polymorphism in a functional database language -- Extending functional database languages to update completeness -- Recognizing graphic detail an experiment in user interpretation of data models -- The pragmatics of naive database enquiry -- Using a conceptual data language to describe a database and its interface -- Scheduling query plans with buffer-requirement estimates -- Optimization of spatial joins using filters -- An efficient transient versioning method -- Concurrency control of tiered flat transactions -- Two-step pruning: A distributed query optimization algorithm -- Text search using database systems revisited - Some experiments -- Integrity merging in an object-oriented federated database environment -- The architecture of the ICL GOLDRUSH MegaSERVER -- W-SQL an interface for scalable,

highly parallel, database machines.

Sommario/riassunto

This volume presents the proceedings of the 13th British National Conference on Databases, BNCOD 13, held in Manchester, UK in July 1995. The volume contains 2 invited contributions and 14 full revised technical papers selected from a total of 64 submissions. The papers are organized in sections on functional databases, user interfaces, system-level algorithms, queries and transactions, and parallel and federated systems. Despite the fact that BNCOD is a national event there is strong international representation in the proceedings.
