Sommario/riassunto

This book constitutes the refereed proceedings of the 11th International Symposium on Practical Aspects of Declarative Languages, PADL 2009, held in Savannah, GA, USA, in January 2009, colocated with POPL 2009, the Symposium on Principles of Programming Languages. The 18 revised full papers presented together with 1 invited talk were carefully reviewed and selected from 48 submissions. The volume features original work emphasizing novel applications and implementation techniques for all forms of declarative concepts, including functions, relations, logic, and constraints. The papers address all current aspects of declarative programming; they are organized in topical sections on user interfaces and environments, networks and data, multi-threading and parallelism, databases and large data sets, tabling and optimization, as well as language extensions and implementation.

Sommario/riassunto

Until this book was published little had appeared on the matter of the organization of production in oil gathering. This book: Describes the global offshore oil supply industry and its features on one of the world's major offshore oil services bases Draws on the theory of the multinational corporation to explain why buyers and sellers should have internationalized themselves into a symbiotic relationship Discusses the preference of the oil companies for vertical disintegration Explains the transaction cost paradigm <
