1.	Record Nr.	UNISA996466186603316
	Titolo	Transactions on Large-Scale Data- and Knowledge-Centered Systems VI [[electronic resource]] : Special Issue on Database- and Expert-Systems Applications / / edited by Abdelkader Hameurlain, Josef Küng, Roland Wagner, Stephen W. Liddle, Klaus-Dieter Schewe, Xiaofang Zhou
	Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2012
	ISBN	3-642-34179-9
	Edizione	[1st ed. 2012.]
	Descrizione fisica	1 online resource (XII, 259 p. 113 illus.)
	Collana	Transactions on Large-Scale Data- and Knowledge-Centered Systems, , 1869-1994 ; ; 7600
	Disciplina	003/.71
	Soggetti	Database management
		Data mining
		Artificial intelligence
		Data structures (Computer science)
		Computer simulation
		Information storage and retrieval
		Database Management
		Data Mining and Knowledge Discovery
		Artificial Intelligence
		Data Storage Representation
		Simulation and Modeling
		Information Storage and Retrieval
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Bibliographic Level Mode of Issuance: Monograph
	Nota di bibliografia	Includes bibliographical references.
	Nota di contenuto	Combination Skyline Queries -- Comparing and Evaluating Approaches to Probabilistic Reasoning: Theory, Implementation, and Applications -- The Science and Art of Conceptual Modelling -- Predictive Line Queries for Traffic Prediction -- A DHT-Based System for the Management of Loosely Structured, Multidimensional Data -- A Grammarware for the Incremental Validation of Integrity Constraints on XML Documents under Multiple Updates -- Database Support for Enabling Data-Discovery Queries over Semantically-Annotated

Observational Data -- Probabilistically Ranking Web Article Quality Based on Evolution Patterns.

Sommario/riassunto	The LNCS journal Transactions on Large-Scale Data- and Knowledge-Centered Systems focuses on data management, knowledge discovery, and knowledge processing, which are core and hot topics in computer science. Since the 1990s, the Internet has become the main driving force behind application development in all domains. An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data- and knowledge-management systems from centralized systems to decentralized systems enabling large-scale distributed applications providing high scalability. Current decentralized systems still focus on data and knowledge as their main resource. Feasibility of these systems relies basically on P2P (peer-to-peer) techniques and the support of agent systems with scaling and decentralized control. Synergy between grids, P2P systems, and agent technologies is the key to data- and knowledge-centered systems in large-scale environments. This, the sixth issue of Transactions on Large-Scale Data- and Knowledge-Centered Systems, contains eight extended and revised versions of papers selected from those presented at DEXA 2011. Topics covered include skyline queries, probabilistic logics and reasoning, theory of conceptual modeling, prediction in networks of moving objects, validation of XML integrity constraints, management of loosely structured multi-dimensional data, data discovery in the presence of annotations, and quality ranking for Web articles.
