

1. Record Nr.	UNISA996466205703316
Titolo	Algorithm Engineering [[electronic resource]] : Bridging the Gap Between Algorithm Theory and Practice // edited by Matthias Müller-Hannemann, Stefan Schirra
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2010
ISBN	3-642-14866-2
Edizione	[1st ed. 2010.]
Descrizione fisica	1 online resource (XVI, 513 p. 72 illus.)
Collana	Theoretical Computer Science and General Issues, , 2512-2029 ; ; 5971
Disciplina	004.01/5181
Soggetti	Computer programming Algorithms Machine theory Software engineering Computer simulation Artificial intelligence—Data processing Programming Techniques Formal Languages and Automata Theory Software Engineering Computer Modelling Data Science
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. [454]-496) and index.
Nota di contenuto	1. Foundations of Algorithm Engineering -- 2. Modeling -- 3. Selected Design Issues -- 4. Analysis of Algorithms -- 5. Realistic Computer Models -- 6. Implementation Aspects -- 7. Libraries -- 8. Experiments -- 9. Case Studies -- 10. Challenges in Algorithm Engineering.
Sommario/riassunto	Algorithms are essential building blocks of computer applications. However, advancements in computer hardware, which render traditional computer models more and more unrealistic, and an ever increasing demand for efficient solution to actual real world problems have led to a rising gap between classical algorithm theory and algorithmics in practice. The emerging discipline of Algorithm Engineering aims at

bridging this gap. Driven by concrete applications, Algorithm Engineering complements theory by the benefits of experimentation and puts equal emphasis on all aspects arising during a cyclic solution process ranging from realistic modeling, design, analysis, robust and efficient implementations to careful experiments. This tutorial - outcome of a GI-Dagstuhl Seminar held in Dagstuhl Castle in September 2006 - covers the essential aspects of this process in ten chapters on basic ideas, modeling and design issues, analysis of algorithms, realistic computer models, implementation aspects and algorithmic software libraries, selected case studies, as well as challenges in Algorithm Engineering. Both researchers and practitioners in the field will find it useful as a state-of-the-art survey.
