Record Nr.	UNISA996466358403316
Titolo	Power-Aware Computer Systems [[electronic resource]] : Third International Workshop, PACS 2003, San Diego, CA, USA, December 1, 2003, Revised Papers / / edited by Babak Falsafi, T. N. Vijaykumar
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2005
ISBN	3-540-28641-1
Edizione	[1st ed. 2005.]
Descrizione fisica	1 online resource (X, 215 p.)
Collana	Lecture Notes in Computer Science, , 0302-9743 ; ; 3164
Disciplina	621.3916
Soggetti	Electronics
	Microelectronics
	Architecture, Computer
	Computer organization
	Computer hardware
	Electrical engineering
	Electronics and Microelectronics. Instrumentation
	Computer System Implementation
	Computer Systems Organization and Communication Networks
	Computer Hardware
	Operating Systems
	Electrical Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Compilers Runtime Biased Pointer Reuse Analysis and Its Application to Energy Efficiency Inter-program Compilation for Disk Energy Reduction Embedded Systems Energy Consumption in Mobile Devices: Why Future Systems Need Requirements–Aware Energy Scale- Down Efficient Scratchpad Allocation Algorithms for Energy Constrained Embedded Systems Online Prediction of Battery Lifetime for Embedded and Mobile Devices Synchroscalar: Initial Lessons in Power-Aware Design of a Tile-Based Embedded Architecture

Sommario/riassunto	Welcome to the proceedings of the 3rd Power-Aware Computer Systems (PACS 2003) Workshop held in conjunction with the 36th Annual International Symposium on Microarchitecture (MICRO-36). The increase in power and - ergy dissipation in computer systems has begun to limit performance and has also resulted in higher cost and lower reliability. The increase also implies - ducedbatterylifeinportablesystems. Becauseofthemagnitudeoftheproblem, alllevelsofcomputersystems, includingcircuits, architectures, andsoftware, are being employed to address power and energy issues. PACS 2003 was the third workshop in its series to explore power- and energy-awareness at all levels of computer systems and brought together experts from academia and industry. These proceedings include 14 research papers, selected from 43 submissions, spanningawidespectrumofareasinpower- awaresystems.Wehavegrouped the papers into the following categories: (1) compilers, (2) embedded systems, (3) microarchitectures, and (4) cache and memory systems. The ?rst paper on compiler techniques proposes pointer reuse analysis that is biased by runtime information (i.e., the targets of pointers are determined based on the likelihood of their occurrence at runtime) to map accesses to ener- e?cient memory access paths (e.g., avoid tag match). Another paper proposes compiling multiple programs together so that disk accesses across the programs can be synchronized to achieve longer sleep times in disks than if the programs are optimized separately.
