

1. Record Nr.	UNISA996466375703316
Autore	Bartsch Thomas <1958->
Titolo	Topological methods for variational problems with symmetries // Thomas Bartsch
Pubbl/distr/stampa	Berlin ; ; Heidelberg : , : Springer-Verlag, , [1993] ©1993
ISBN	3-540-48099-4
Edizione	[1st ed. 1993.]
Descrizione fisica	1 online resource (X, 158 p.)
Collana	Lecture Notes in Mathematics ; ; 1560
Disciplina	515.64
Soggetti	Calculus of variations Symmetry groups Critical point theory (Mathematical analysis)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Category, genus and critical point theory with symmetries -- Category and genus of infinite-dimensional representation spheres -- The length of G-spaces -- The length of representation spheres -- The length and Conley index theory -- The exit-length -- Bifurcation for $O(3)$ -equivariant problems -- Multiple periodic solutions near equilibria of symmetric Hamiltonian systems.
Sommario/riassunto	Symmetry has a strong impact on the number and shape of solutions to variational problems. This has been observed, for instance, in the search for periodic solutions of Hamiltonian systems or of the nonlinear wave equation; when one is interested in elliptic equations on symmetric domains or in the corresponding semiflows; and when one is looking for "special" solutions of these problems. This book is concerned with Lusternik-Schnirelmann theory and Morse-Conley theory for group invariant functionals. These topological methods are developed in detail with new calculations of the equivariant Lusternik-Schnirelmann category and versions of the Borsuk-Ulam theorem for very general classes of symmetry groups. The Morse-Conley theory is applied to bifurcation problems, in particular to the bifurcation of steady states and hetero-clinic orbits of $O(3)$ -symmetric flows; and to the existence of periodic solutions nearequilibria of symmetric

Hamiltonian systems. Some familiarity with the usual minimax theory and basic algebraic topology is assumed.
