1. Record Nr. UNISA996466380803316

Autore	Feichtinger Hans G
Titolo	Pseudo-Differential Operators [[electronic resource]] : Quantization and Signals / / by Hans G. Feichtinger, Bernard Helffer, Michael Lamoureux, Nicolas Lerner, Joachim Toft ; edited by Luigi Rodino, M. W. Wong
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2008
ISBN	3-540-68268-6
Edizione	[1st ed. 2008.]
Descrizione fisica	1 online resource (XXIV, 214 p. 11 illus.)
Collana	C.I.M.E. Foundation Subseries ; ; 1949
Disciplina	515.7242
Soggetti	Partial differential equations Operator theory Approximation theory Fourier analysis Numerical analysis Quantum physics Partial Differential Equations Operator Theory Approximations and Expansions Fourier Analysis Numerical Analysis Quantum Physics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes bibliographical references.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Banach Gelfand Triples for Gabor Analysis -- Four Lectures in Semiclassical Analysis for Non Self-Adjoint Problems with Applications to Hydrodynamic Instability -- An Introduction to Numerical Methods of Pseudodifferential Operators -- Some Facts About the Wick Calculus -- Schatten Properties for Pseudo-Differential Operators on Modulation Spaces.
Sommario/riassunto	Pseudo-differential operators were initiated by Kohn, Nirenberg and Hörmander in the sixties of the last century. Beside applications in the

general theory of partial differential equations, they have their roots also in the study of quantization first envisaged by Hermann Weyl thirty years earlier. Thanks to the understanding of the connections of wavelets with other branches of mathematical analysis, quantum physics and engineering, such operators have been used under different names as mathematical models in signal analysis since the last decade of the last century. The volume investigates the mathematics of quantization and signals in the context of pseudo-differential operators, Weyl transforms, Daubechies operators, Wick quantization and time-frequency localization operators. Applications to quantization, signal analysis and the modern theory of PDE are highlighted.
