	Nota di bibliografia	Includes bibliographical references and index.
	Sommario/riassunto	Collection of twenty-nine fairy tales featuring Baba Yaga that draws from the famous collection of Aleksandr Afanas'ev, but also includes some tales from the lesser-known nineteenth-century collection of Ivan Khudiakov, along with images that show how artists have imagined her for over more than two centuries.

	Nota di contenuto	Foreword -- Prolegomena -- Chapter 1: A First Look at Spectral Theory -- Chapter 2: Unbounded Operators -- Chapter 3: Spectrum -- Chapter 4: Compact Operators -- Chapter 5: Fredholm Theory -- Chapter 6:Spectrum of Self-Adjoint Operators -- Chapter 7: Hille-Yosida and Stone's Theorems -- Chapter 8: About the Spectral Measure -- Chapter 9: Trace-class and Hilbert-Schmidt Operators -- Chapter 10: Selected Applications of the Functional Calculus -- Appendix A: Reminders of Functional Analysis -- Bibliography -- Index.
	Sommario/riassunto	This textbook provides a graduate-level introduction to the spectral theory of linear operators on Banach and Hilbert spaces, guiding readers through key components of spectral theory and its applications in quantum physics. Based on their extensive teaching experience, the authors present topics in a progressive manner so that each chapter builds on the ones preceding. Researchers and students alike will also appreciate the exploration of more advanced applications and research

perspectives presented near the end of the book. Beginning with a brief introduction to the relationship between spectral theory and quantum physics, the authors go on to explore unbounded operators, analyzing closed, adjoint, and self-adjoint operators. Next, the spectrum of a closed operator is defined and the fundamental properties of Fredholm operators are introduced. The authors then develop the Grushin method to execute the spectral analysis of compact operators. The chapters that follow are devoted to examining Hille-Yoshida and Stone theorems, the spectral analysis of self-adjoint operators, and trace-class and Hilbert-Schmidt operators. The final chapter opens the discussion to several selected applications. Throughout this textbook, detailed proofs are given, and the statements are illustrated by a number of well-chosen examples. At the end, an appendix about foundational functional analysis theorems is provided to help the uninitiated reader. A Guide to Spectral Theory: Applications and Exercises is intended for graduate students taking an introductory course in spectral theory or operator theory. A background in linear functional analysis and partial differential equations is assumed; basic knowledge of bounded linear operators is useful but not required. PhD students and researchers will also find this volume to be of interest, particularly the research directions provided in later chapters.

	Sommario/riassunto	Los trabajos que este libro reúne surgen de investigaciones de campo que exploran, de manera comparativa y pluridisciplinaria, cuatro aspectos fundamentales de los llamados "espacios infranacionales" dentro de la globalización: las reorganizaciones productivas de las ciudades y regiones; las transformaciones de las instituciones y los actores involucrados en la toma de decisiones a nivel local; las recomposiciones territoriales y las movilidades espaciales que las acompañan; y los cambios en las condiciones de vida y las identidades de los residentes. El objetivo es destacar la interdependencia de estos cuatro temas no sólo desde una perspectiva académica y teórica, sino también desde el punto de vista de las estrategias, de las "lógicas

prácticas" de actores locales en su adaptación a una de las transformaciones más profundas de la historia del capitalismo. La obra está organizada en cuatro secciones: las dos primeras agrupan artículos que abordan, por una parte, las dinámicas de los cambios en las aglomeraciones productivas urbanas y regionales v, por otra, la afirmación de nuevos actores que desempeñan un papel relevante en la transformación de los tejidos productivos o en las políticas públicas encaminadas a apoyarlos; la tercera sección se ocupa de aquellas adaptaciones que, mediante las movilidades de los trabajadores locales, han influido sobre las diferencias de oportunidades económicas entre las distintas escalas espaciales; finalmente, en la cuarta sección se estudian los cambios en los modos y las condiciones de vida de los residentes de las ciudades y regiones que se acompañan, frecuentemente, de transformaciones y luchas de representaciones de las identidades.
