

1. Record Nr.	UNISA996466399703316
Autore	Pandolfi L (Luciano)
Titolo	Systems with persistent memory : controllability, stability, identification // Luciano Pandolfi
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2021] ©2021
ISBN	3-030-80281-7
Descrizione fisica	1 online resource (365 pages)
Collana	Interdisciplinary applied mathematics ; ; 54
Disciplina	511.8
Soggetti	Mathematical models Models matemàtics Anàlisi funcional Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Contents -- 1 Preliminary Considerations and Examples -- 1.1 The Systems with Persistent Memory Studied in This Book -- 1.2 Heuristics on the Wave and Heat Equations with and Without Memory -- 1.3 The Archetypal Model: The String Equation with Memory -- 1.3.1 The String Equation Without Memory on a Half Line -- 1.3.1.1 A Control Problem for the String Equation Without Memory -- 1.4 The String with Persistent Memory on a Half Line -- 1.4.1 Finite Propagation Speed -- 1.4.2 A Formula for the Solutions and a Control Problem -- 1.4.2.1 From the Regularity of the Input to the Interior Regularity -- 1.4.2.2 The Response Operator -- 1.4.2.3 From the Regularity of the Target to the Regularity of the Control -- 1.5 Diffusion Processes and Viscoelasticity: the Derivation of the Equations with Persistent Memory -- 1.5.1 Thermodynamics with Memory and Non-Fickian Diffusion -- 1.5.2 Viscoelasticity -- 1.5.3 A Problem of Filtration -- 1.5.4 Physical Constraints -- References -- 2 Operators and Semigroups for Systems with Boundary Inputs -- 2.1 Preliminaries on Functional Analysis -- 2.1.1 Continuous Operators -- 2.1.2 The Complexification of Real Banach or Hilbert Spaces -- 2.1.3 Operators and Resolvents -- 2.1.4 Closed and Closable Operators -- 2.1.5 The

Transpose and the Adjoint Operators -- 2.1.5.1 The Adjoint, the  
 Transpose and the Image of an Operator -- 2.1.6 Compact Operators in  
 Hilbert Spaces -- 2.2 Integration, Volterra Integral Equations and  
 Convolutions -- 2.3 Laplace Transformation -- 2.3.1 Holomorphic  
 Functions in Banach Spaces -- 2.3.2 Definition and Properties of the  
 Laplace Transformation -- 2.3.3 The Hardy Space  $H^2_+(\mathbb{H})$  and the  
 Laplace Transformation -- 2.4 Graph Norm, Dual Spaces, and the Riesz  
 Map of Hilbert spaces -- 2.4.1 Relations of the Adjoint and the  
 Transpose Operators.  
 2.5 Extension by Transposition and the Extrapolation Space -- 2.5.1  
 Selfadjoint Operators with Compact Resolvent -- 2.5.1.1 Fractional  
 Powers of Positive Operators with Compact Resolvent -- 2.6  
 Distributions -- 2.6.1 Sobolev Spaces -- 2.6.1.1 Sobolev Spaces of  
 Hilbert Space Valued Functions -- 2.6.1.2 Sobolev Spaces of Any Real  
 Order -- 2.7 The Laplace Operator and the Laplace Equation -- 2.7.1  
 The Laplace Equation with Nonhomogeneous Dirichlet Boundary  
 Conditions -- 2.7.2 The Laplace Equation with Nonhomogeneous  
 Neumann Boundary Conditions -- 2.8 Semigroups of Operators --  
 2.8.1 Holomorphic Semigroups -- 2.9 Cosine Operators and  
 Differential Equations of the Second Order -- 2.10 Extensions by  
 Transposition and Semigroups -- 2.10.1 Semigroups, Cosine  
 Operators, and Boundary Inputs -- 2.11 On the Terminology and a  
 Final Observation -- References -- 3 The Heat Equation with Memory  
 and Its Controllability -- 3.1 The Abstract Heat Equation with Memory  
 -- 3.2 Preliminaries on the Associated Memoryless System -- 3.2.1  
 Controllability of the Heat Equation (Without Memory) -- 3.3 Systems  
 with Memory, Semigroups, and Volterra Integral Equations -- 3.3.1  
 Projection on the Eigenfunctions -- 3.4 The Definitions of  
 Controllability for the Heat Equation with Memory -- 3.5 Memory  
 Kernels of Class  $H_1$ : Controllability via Semigroups -- 3.5.1  
 Approximate Controllability Is Inherited by the System with Memory --  
 3.5.2 Controllability to the Target 0 Is Not Preserved -- 3.6 Frequency  
 Domain Methods for Systems with Memory -- 3.6.1 Well Posedness via  
 Laplace Transformation -- 3.7 Controllability via Laplace  
 Transformation -- 3.7.1 Approximate Controllability Is Inherited by the  
 System with Memory -- 3.7.2 Controllability to the Target 0 Is Not  
 Preserved -- 3.8 Final Comments -- References -- 4 The Wave  
 Equation with Memory and Its Controllability.  
 4.1 The Equations with and Without Memory -- 4.1.1 Admissibility and  
 the Direct Inequality for the System Without Memory -- 4.2 The  
 Solution of the Wave Equation with Memory -- 4.2.1 Admissibility and  
 the Direct Inequality for the Wave Equation with Memory -- 4.2.1.1  
 Admissibility and Fourier Expansion -- 4.2.2 Finite Speed of  
 Propagation -- 4.2.3 Memory Kernel of Class  $H_2$  and Compactness --  
 4.3 The Definitions of Controllability and Their Consequences -- 4.3.1  
 Controllability of the Wave equation (Without Memory) with Dirichlet  
 Boundary Controls -- 4.3.1.1 Fourier Expansions -- 4.3.2  
 Controllability of the Wave Equation (Without Memory) with Neumann  
 Boundary Controls -- 4.3.2.1 Fourier Expansions -- 4.3.3  
 Controllability of the Wave Equation and Eigenvectors -- 4.4  
 Controllability of the Wave Equation with Memory: The Definitions --  
 4.4.1 Computation of  $D, T^*$  and  $N, T^*$  -- 4.5 Wave Equation with  
 Memory: the Proof of Controllability -- 4.6 Final Comments --  
 References -- 5 The Stability of the Wave Equation with Persistent  
 Memory -- 5.1 Introduction to Stability -- 5.2 The Memory Kernel  
 When the System Is Stable -- 5.2.1 Consequent Properties of the  
 Memory Kernel  $M(t)$  -- 5.2.1.1 The Real and the Imaginary Parts of ( $\cdot$ )  
 -- 5.2.1.2 The Resolvent Kernel  $R(t)$  of  $-M(t)$  -- 5.2.2 Positive Real

(Transfer) Functions -- 5.3 L2-Stability via Laplace Transform and Frequency Domain Techniques -- 5.3.1 L2-Stability When  $\neq 0$  -- 5.3.2 The Memory Prior to the Time 0 -- 5.4 Stability via Energy Estimates -- 5.5 Stability via the Semigroup Approach of Dafermos -- 5.5.1 Generation of the Semigroup in the History Space -- 5.5.2 Exponential Stability via Semigroups -- 5.6 Final Comments -- References -- 6 Dynamical Algorithms for Identification Problems -- 6.1 Introduction to Identification Problems -- 6.1.1 Deconvolution and Numerical Computation of Derivatives. 6.2 Dynamical Algorithms for Kernel Identification -- 6.2.1 A Linear Algorithm with Two Independent Measurements: Reduction to a Deconvolution Problem -- 6.2.2 One Measurement: A Nonlinear Identification Algorithm -- 6.2.3 Quasi Static Algorithms -- 6.3 Dynamical Identification of an Elastic Coefficient -- 6.3.1 From the Connecting Operator to the Identification of  $q(x)$  -- 6.3.2 The Blagoveshchenski Equation and the Computation of the Connecting Operator -- 6.3.2.1 Well Posedness of the Blagoveshchenski Equation -- 6.4 Final Comments -- References -- 7 Final Miscellaneous Problems -- 7.1 Solutions of a Nonlinear System with Memory: Galerkin's Method -- 7.2 Asymptotics of Linear Heat Equations with Memory Perturbed by a Sector Nonlinearity -- 7.2.1 Dafermos Method for the Heat Equation with Memory -- 7.2.2 Asymptotic Properties of the Perturbed Equation -- 7.3 Controllability and Small Perturbations -- 7.3.1 The Bellini-Morante Method and Controllability -- 7.4 Memory on the Boundary -- 7.5 A Glimpse to Numerical Methods for Systems with Persistent Memory -- References -- Index.
