1. Record Nr.   UNISA996466484803316

   Titolo   Numerical solution of nonlinear equations : proceedings, Bremen, 1980
                           / / edited by E. L. Allgower, K. Glashoff, H. -O. Peitgen

   Pubbl/distr/stampa   Berlin, Germany : , : Springer, , [1981]
                           ©1981

   ISBN   3-540-38781-1

   Edizione   [1st ed. 1981.]

   Descrizione fisica   1 online resource (XIV, 442 p.)

   Collana   Lecture Notes in Mathematics, , 0075-8434 ; ; 878

   Disciplina   515.355

   Soggetti   Numerical analysis

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Note generali   Bibliographic Level Mode of Issuance: Monograph

   Nota di contenuto   A survey of homotopy methods for smooth mappings -- Discrete
                           correction methods for operator equations -- A duffing equation with
                           more than 20 branch points -- Einschliessungssätze für Fixpunkte -- A
                           numerically stable update for simplicial algorithms -- Numerical
                           integration of the Davidenko equation -- Fixpunktprinzipien und Freie
                           Randwertaufgaben -- A derivative-free arc continuation method and a
                           bifurcation technique -- An introduction to variable dimension
                           algorithms for solving systems of equations -- Labelling rules and
                           orientation: On Sperner's lemma and brouwer degree -- On the
                           numerical solution of contact problems -- Positive and spurious
                           solutions of nonlinear eigenvalue problems -- Change of structure and
                           chaos for solutions of (t) = ?f(x(t?1)) -- Chaotic mappings on S1
                           periods one, two, three imply chaos on S1 -- An algorithm for
                           ultrasonic tomography based on inversion of the Helmholtz equation
                           -- On the numerical approximation of secondary bifurcation problems
                           -- Some improvements of classical iterative methods for the solution of
                           nonlinear equations.
