Lecture Notes in Mathematics Collana Disciplina 511.64 Soggetti Magic squares Finite geometries Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia Bibliographic Level Mode of Issuance: Monograph Note generali Elementary abelian groups -- Cyclotomic orthomorphisms --Nota di contenuto Automorphisms and translation nets -- Further results -- Data for small groups -- Research directions. This book is about orthomorphisms and complete mappings of groups, Sommario/riassunto and related constructions of orthogonal latin squares. It brings together, for the first time in book form, many of the results in this area. The aim of this book is to lay the foundations for a theory of orthomorphism graphsof groups, and to encourage research in this area. To this end, many directions for future research are suggested. The material in this book should be accessible to any graduate student who has taken courses in algebra (group theory and field theory). It will

theory and field theory.

mainly be useful in research on combinatorial design theory, group
